[1] NSF proposes to change the name of the Directorate for Education and Human Resources (EHR) to the Directorate for STEM Education (EDU).

[2] Formerly this division was named the Division of Human Resource Development (HRD). NSF proposes to rename this division as shown.

[3] The Graduate Research Fellowship Program is consolidated within the EHR Division of Graduate Education in FY 2022 and is restated in prior years for comparability.

About EDU

The National Science Foundation proposes to rename the Directorate for Education and Human Resources (EHR) to the Directorate for STEM Education (EDU) and rename the Division of Human Resource Development (HRD) within the EDU to the Division of Equity for Excellence in STEM (EES). This is being done to more accurately capture the totality of the Directorate's work.

The work of EDU closely aligns with the Administration's priorities of advancing equity and addressing systemic racism to remove barriers for diverse communities. Through existing programs, EDU supports activities and research that aim to increase participation in science and engineering of individuals from racial and ethnic groups who are traditionally underrepresented in STEM fields, including at MSIs. When coupled with equally important priorities to expand clean energy, strengthen the economy, and maintain global competitiveness in emerging technologies, it is apparent that STEM education and research play a central role in fostering the necessary social and economic infrastructure to support these initiatives. Now, more than ever, the Nation needs a robust STEM enterprise that includes a diverse, highly skilled U.S. STEM workforce with competitive salaries and a STEM-literate public. Both the STEM workforce and the STEM-literate public are needed to address societal challenges that were exacerbated by the global pandemic and to support a vibrant U.S. economy.

The STEM enterprise is a microcosm of society; the challenges that impact society are reflected and often magnified in STEM education at all levels. To bolster the STEM education communities most challenged in FY 2021 and FY 2022, EDU increased investments in racial equity research across the directorate while also expanding opportunities for community colleges and making supplements to fund post-doctoral training in STEM education. The results from EDU's investments in foundational and future-oriented STEM educational research are used to inform STEM programs and practices, to ensure the prosperity of the Nation through a well-educated STEM workforce that will contribute to efforts to raise the Nation's leadership in STEM education. As with all research, results might be applied more immediately or well into the future. In FY 2023, EDU will deepen efforts to build capacity for STEM education research and identify and tackle the challenges in STEM education that must be met to create a well-paid workforce for the emerging industries that will help drive the U.S. economy.

Thus, EDU invests in projects to address foundational (perennial) issues in STEM education by exploring persistent questions about the learning and teaching of STEM content, as well as future-oriented issues that result from changes in technology, the Nation's demography, the economy, and new directions in STEM. These future-oriented areas include how and what to teach students so that they are prepared to engage with AI, QIS, and computing, and how to do so in a manner (virtually, in-person, or in a blended format) that reduces demographic disparities. Partnerships with the private sector have been and will continue to be used to good advantage. EDU's partnership with Boeing is one model for leveraging public-private partnerships to develop the STEM workforce for emerging industries. In FY 2020, EDU and Boeing focused on how to develop the workforce in model-based engineering, mechatronics, and data science/sensor analytics through the use of flexible, personalized learning systems. In FY 2023, EDU will continue to study the implementation of personalized learning systems in developing the STEM workforce, while engaging in conversations with potential industry partners that build on successful collaborations with Boeing, Accenture, General Electric, and Intel.

EDU allocations across divisions are designed to accomplish the collective work of the directorate, best characterized by three underlying themes: contributing to research on STEM learning and learning environments, broadening participation and institutional capacity in STEM, and developing the STEM professional workforce. Progress in STEM depends on innovators and future leaders in the Nation's science and engineering (S&E) enterprise in both the public and private sectors. Innovators from PreK-12 and informal learning environments are critical members of the future STEM and STEM-related workforce. Through its scholarship, fellowship, and traineeship programs, EDU supports the development of talent at the undergraduate and graduate levels. EDU programs such as the Advanced Technological Education (ATE) support the STEM workforce indirectly or directly, including a data-skilled workforce and the broader workforce that rely on STEM skills, thus addressing the Nation's critical need for a highly skilled technical workforce that reflects the diversity of society and is attractive to employers that offer competitive salaries. The Centers of Research Excellence in Science and Technology (CREST), the Alliances for Graduate Education and the Professoriate (AGEP), and the Graduate Research Fellowship Program (GRFP) serve to provide graduate students and faculty with the research experiences needed for them to participate fully in the workforce of the future. In FY 2023, the divisions will collaborate to sponsor one or more workshops to bring experts in the field to explore synergies amongst existing EDU projects with an eye towards creating a community of practitioners engaged in institutional transformation.

The progress of S&E also depends on a public that can take full advantage of well-paid STEM-related employment opportunities that help drive the U.S. economy, and that values and participates in STEM, both formally and informally. The Discovery Research PreK-12 (DRK-12) program and Advancing Informal STEM Learning (AISL) program both support evidence-based approaches to learning in formal and informal settings. Importantly, the opportunities made possible by federal investments in STEM must be provided effectively to—and draw from—the full and diverse talent pool of the Nation. To this end, EDU continues to support the Historically Black Colleges and Universities Undergraduate Program (HBCU-UP), the Improving Undergraduate STEM Education: Hispanic-Serving Institutions (IUSE:HSI) program, and the Tribal Colleges and Universities Program (TCUP). EDU's support facilitates the advancement of early career STEM professionals at MSIs and enhances the academic experiences of students studying STEM at MSIs.

As a natural extension of EDU's experience in broadening participation, EDU serves as the lead directorate and the steward of funds designated for the NSF-wide investments for the Big Idea: NSF

INCLUDES. EDU continues to support the generation of new knowledge and its dissemination through NSF INCLUDES to understand what interventions work to broaden participation in STEM and under what conditions. For more information about NSF INCLUDES, see the Big Ideas narrative in the Cross Theme Topics section of the NSF-Wide Investments chapter.

EDU also supports NSF and Administration priorities through participation in Foundation-wide activities. Through existing programs, EDU invests in NSF's Big Ideas Harnessing the Data Revolution, the Future of Work at the Human Technology Frontier, and Navigating the New Arctic. By incorporating the Big Ideas into the NSF Research Traineeship (NRT) program's priority themes, EDU invests in developing researchers with the necessary skills to conduct convergence research. In FY 2023, EDU continues to support the education and workforce aspects of Secure and Trustworthy Cyberspace (SaTC), and Networking and Information Technology Research and Development (NITRD), which provide opportunities for research on the intersection of artificial intelligence and education.

EDU continues its strong emphasis on evidence-based decision making and its commitment to generating robust evidence to inform the development, management, and assessment of its programs and portfolios of investment. A multi-year learning agenda (evidence-building plan) for EDU's STEM human capital development programs will inform and guide future actions. EDU experts in evaluation will continue to collaborate with staff in NSF's Evaluation and Assessment Capability in developing NSF-wide learning agendas and with other federal agencies to share best practices, work toward the use of common metrics and instruments, strengthen evidence-building capacity for decision-making, and support transparency and accountability.

Major Investments

EDU Major Investments

(Dollars in Millions)

Area of Investment[1,2]	FY 2021 Actual	FY 2022 (TBD)	FY 2023 Request	Change over FY 2021 Actual	
				Amount	Percent
Advanced Manufacturing	$22.19	-	$5.00	-$17.19	-77.5%
Artificial Intelligence	29.04	-	50.00	20.96	72.2%
Biotechnology	14.41	-	9.00	-5.41	-37.6%
Graduate Research Fellowship Program[3]	284.45	-	355.51	71.06	25.0%
Improving Undergraduate STEM Education	90.00	-	95.50	5.50	6.1%
NSF INCLUDES	20.00	-	50.50	30.50	152.5%
Quantum Information Science	10.52	-	5.00	-5.52	-52.5%
Secure & Trustworthy Cyberspace[4]	59.99	-	75.00	15.01	25.0%
STEM Education Postdoctoral Research Fellowship	-	-	5.00	5.00	N/A

[1] Major investments may have funding overlap and thus should not be summed.

[2] This table reflects this directorate's support for selected areas of investment. In other directorate narratives, areas of investment displayed in this table may differ and thus should not be summed across narratives.

[3] The Graduate Research Fellowship Program is consolidated within the EDU Division of Graduate Education in FY 2022 and is restated in prior years for comparability.

[4] FY 2023 Request funding includes $5.0 million to strengthen the national cybersecurity workforce pipeline, which is complementary to the Cyber Defense Education & Training program at the Cybersecurity and Infrastructure Security Agency. An additional $5.0 million for this program is budgeted within CISE.

- Advanced Manufacturing: EDU invests in workforce development to attract, educate, train, and reskill/upskill diverse workers for the manufacturing workforce of the future.
- AI in Education and Workforce: EDU activities in this area include investments in NRT for AI focused traineeships; the Artificial Intelligence Research Institutes; AI at the intersection of cybersecurity; as well as investments in AI across EDU programs.
- Biotechnology: EDU invests in biotechnology through research and workforce development programs.
- GRFP: In FY 2023, funding for GRFP will continue to be stewarded in EDU. For more information on GRFP, see the Major Investments in STEM Graduate Education narrative within the Cross Theme Topics section of the NSF-Wide Investments chapter.
- IUSE: EDU will lead the NSF-wide IUSE activity. For more information, see the IUSE narrative within the Cross Theme Topics section of the NSF-Wide Investments chapter.
- NSF INCLUDES: EDU will support NSF INCLUDES Alliances. For more information, see the Big Ideas narrative within the Cross Theme Topics section of the NSF-Wide Investments chapter.
- QIS: EDU invests in QIS through education and workforce development programs to prepare a diverse quantum information science and engineering workforce.
- SaTC: EDU will support SaTC activities through the CyberCorps®: Scholarship for Service (SFS) program.
- STEM Education Postdoctoral Research Fellowship (first piloted as an ARP funded activity in FY 2022): The division will formally establish the program to support postdoctoral awards designed to enhance the research knowledge, skills, and practices of recent doctoral graduates in STEM, STEM education, education, and related disciplines.

EDU Major Investments in Broadening Participation

EDU Programs to Broaden Participation

(Dollars in Millions)

FY 2023 Summary Statement
(Dollars in Millions)

	Enacted/ Request	Unobligated Balance Available Start of Year	Unobligated Balance Available End of Year	Adjustments to Prior Year Accounts	Transfers	Obligations Actual/ Estimates
FY 2021 Appropriation	$1,029.00	$4.25	-$42.67	$2.08		$992.66
FY 2022 Annualized CR	968.00	42.67				1,010.67
FY 2023 Request	1,377.18					1,377.18
$ Change from FY 2022 Annualized CR						$366.51
% Change from FY 2022 Annualized CR						36.3%

Totals exclude reimbursable amounts.

Explanation of Carryover

STEM Education (EDU; formerly Education and Human Resources)
Within the EDU account, $42.67 million (including $37.0 million in American Rescue Plan Funding) was carried over into FY 2022.

Presidential Award for Excellence and Teaching
• Amount: $1.35 million
• Purpose: These carryover funds will be used to recognize recipients of the Presidential Awards for Excellence in Mathematics, Science Teaching and recipients of the Presidential Awards for Excellence in Science, Mathematics, and Engineering Mentoring.
• Obligation: FY 2022 Quarter 2 and Anticipated FY 2022 Quarter 3.

Robert Noyce Teacher Scholarship Program (Noyce)
• Amount: $4.31 million
• Purpose: These funds will be used to invest in teacher preparation and/or support Noyce fellows during completion of a teaching obligation.
• Obligation: FY 2022 Quarter 3.

American Rescue Plan (EDU)
• Amount: $37.0 million
• Purpose: Funds will be used for awards that were not read for obligation in FY 2021.
• Obligation: FY 2022 Quarter 1–2 and remaining amounts to be obligated in Quarter 3.

Funding Profile

	FY 2021 Actual Estimate	FY 2022 (TBD)	FY 2023 Estimate
Statistics for Competitive Awards:			
Number of Proposals	4,556		4,850
Number of New Awards	925		1,350
Regular Appropriation	893		1,350
ARP	32		
Funding Rate	20%		28%
Statistics for Research Grants:			
Number of Research Grant Proposals	3,578		3,650
Number of Research Grants	608		950
Regular Appropriation	580		950
ARP	28		
Funding Rate	17%		26%
Median Annualized Award Size	$166,646		$260,000
Average Annualized Award Size	$275,445		$280,000
Average Award Duration, in years	3.1		3.1

EDU Funding Profile

In FY 2023, the number of research grant proposals is expected to increase by approximately 100 compared to the FY 2021 Actual, and EDU expects to award about 950 research grants accounting for the increase in overall grant funding. Average annual award size and duration are not expected to materially fluctuate in FY 2021 through FY 2023.

People Involved in EDU Activities

Number of People Involved in EDU Activities

	FY 2021 Actual Estimate	FY 2021 ARP Actual Estimate	FY 2022 (TBD)	FY 2023 Estimate
Senior Researchers	7,829	278	-	8,900

Education	71.13	-	98.64	27.51	38.7%

About EES

EDU's Division of Human Resource Development (HRD) will be renamed the "Division of Equity for Excellence in STEM" (EES). The new name better reflects the mission, activities, and portfolio of the division. EES serves as a focal point for NSF's agency-wide commitment to broadening participation of groups historically underrepresented in STEM—minorities, women, and persons with disabilities by enhancing the quality and excellence of STEM education and research opportunities. EES's mission is to create and grow a vibrant and diverse U.S. STEM workforce by supporting the inclusion and participation of individuals historically underrepresented in STEM and the institutions that serve them. Programs within EES have a strong focus on partnerships and collaborations in support of institutional transformation and capacity building that lead to increased STEM participation of underrepresented groups. Priority is placed on investments in innovative and transformative strategies that serve as models for achieving the full participation of these populations and for providing opportunities for educators, researchers, and institutions, particularly at MSIs. These investments help to mitigate the deleterious impacts of the COVID-19 pandemic on STEM education and the STEM enterprise by supporting and growing the Nation's diverse STEM talent. EES will continue efforts to better engage and serve persons with disabilities, including activities related to the "Persons with Disabilities – STEM Engagement and Access (PWD-SEA)" Dear Colleague Letter.

FY 2023 Summary

Research
- AGEP funds will continue to support innovative STEM faculty career pathway models for advancing doctoral students, postdoctoral scholars and faculty who are historically underrepresented minorities in STEM. The AGEP program will continue efforts to complete awardee site reviews, share best practices and collaborative partnerships findings, and network through the annual AGEP research conference.
- CREST program focuses on building research capacity at MSIs that have undergraduate enrollments of 50 percent or more of members from minority groups underrepresented among those holding advanced degrees in science or engineering fields. Funding will continue to support CREST centers, HBCUs through the Research Infrastructure for Science and Engineering component, and additional Postdoctoral Research Fellows, fostering increased collaborations across the centers and building research capacity at minority serving institutions.
- The EDU Core Research (ECR) program supports fundamental research and capacity building initiatives. ECR research projects explores persistent and emerging, curiosity-driven and use-inspired basic research questions with the goal of generating foundational knowledge in three

broadly conceived research areas: STEM learning and learning environments, broadening participation in STEM fields, and STEM workforce development. ECR also supports activities that build individuals' capacity to carry out high quality STEM education research. In FY 2023, ECR will continue to support fundamental research that addresses persistent issues and questions in the learning and teaching of STEM content. ECR will also support research that envisions and explores STEM learning environments of the future; examines how learning and teaching will change with advances in technology; explores factors at the institutional, structural, organizational, societal, and systemic levels that affect STEM teaching, learning, and participation in STEM education and the workforce; and develops new methodologies to tackle new questions. In FY 2023 EDU will also continue efforts through the ECR Building Capacity in STEM Education Research initiative to build individuals' capacity to conduct--and broaden the pool of researchers that carry out--the high-quality STEM education research that enhances the Nation's STEM education enterprise.

- HSI will continue to support the improvement of undergraduate education at HSIs and build capacity for STEM education and research at HSIs that have previously received little or no funding from NSF. Outreach efforts will continue to seek to engage institutions that are new to NSF.
- NSF INCLUDES will continue to fund broadening participation projects and related research through NSF INCLUDES Alliances and other existing NSF broadening participation portfolio programs. These include pilot projects, planning grants, and supplements that serve as on-ramps to the NSF INCLUDES Alliances and the NSF INCLUDES National Network. For more information about NSF INCLUDES, see the NSF Big Ideas narrative in the Cross Theme Topics section of the NSF-Wide Investments chapter.
- TCUP funding will support the design, implementation, and assessment of comprehensive institutional improvements in STEM instruction to advance the quality of student preparation in STEM at tribal colleges and universities. TCUP will also continue to support projects to build and enhance STEM research capacity at TCUP institutions. TCUP will support eligible institutions through the TCUP Enterprise Advancement Centers to partner with tribal communities to enhance their ability to respond to community needs.

<u>Education</u>
- ADVANCE will continue to support evidence-based systemic change strategies to promote equity in STEM academic workplaces. ADVANCE will continue to support adaptation of successful practices for achieving institutional change.
- Excellence Awards in Science and Engineering (EASE) will continue to coordinate and support the Presidential Awards for Excellence in Mathematics and Science Teaching (PAEMST) and Presidential Awards for Excellence in Science, Mathematics, and Engineering (PAESMEM) awards.
- HBCU-UP funds will support research for HBCU STEM faculty, enhance the academic experience of students, increase numbers of students completing STEM degrees, and support institutional transformation efforts. The program will continue to support broadening participation research through its HBCU-UP Broadening Participating Research Centers.
- Louis Stokes Alliances for Minority Participation (LSAMP) funding will continue to support an increased focus on broadening participation in STEM research and evaluation to expand knowledge about effective strategies for student recruitment, retention, and persistence in STEM programs. Additionally, LSAMP will emphasize support for evidence-based interventions that are proven to increase STEM baccalaureate degree production, particularly mentoring and early experiential research experiences nationally and abroad and continue support for STEM post-baccalaureate activities and will continue to support activities at the transfer and transition points through the Bridges to the Baccalaureate and Bridges to the Doctorate tracks.

DIVISION OF GRADUATE EDUCATION (DGE) $519,120,000
                                                                      +$98,550,000 / 23.4%

	DGE Funding (Dollars in Millions)			Change over FY 2021 Actual	
	FY 2021 Actual	FY 2022 (TBD)	FY 2023 Request	Amount	Percent
Total	**$420.57**	**-**	**$519.12**	**$98.55**	**23.4%**
Research	18.12	-	21.11	2.99	16.5%
Education[1]	402.45	-	498.01	95.56	23.7%

[1] GRFP is consolidated within the EDU Division of Graduate Education in FY 2022 and is restated in prior years for comparability.

About DGE

DGE provides leadership for cross-Foundation investments that support a diverse cadre of U.S. graduate students in STEM and STEM education research, and for improvement and innovation in graduate education to prepare tomorrow's STEM leaders. The division pursues these goals through direct investment in individuals; funding projects that spearhead the development and implementation of bold, new, and potentially transformative models for graduate education training in high priority interdisciplinary or convergent research areas; and through basic research on STEM graduate education. This research supports innovations in graduate education by exploring new ways for graduate students in research-based master's and doctoral degree programs to develop the skills, knowledge, and competencies needed to pursue a range of STEM careers in the 21st century. Special emphasis is given to training students in areas of national priority. DGE also leads EDU research on the development of the STEM professional workforce. The resulting body of research expands the knowledge base that informs successful models, practices, and approaches for the preparation of a STEM professional workforce ready to advance the frontiers of science and engineering and to assume leadership roles in emerging industries.

FY 2023 Summary

Research
- The ECR program supports fundamental research and capacity building initiatives. ECR is managed and funded across all EDU divisions. For a full description, see the EES Division narrative.

Education
- NSF GRFP will be fully funded in EDU in FY 2023 at a total funding level of $355.51 million to support 2,750 new fellowships, with a cost of education allowance of $12,000 and a stipend of $37,000 per fellow. The GRFP program will continue to align awards with Administration priorities. In addition, DGE will continue efforts to ensure that GRFP recipients reflect the diversity of the STEM graduate student population and to improve professional development opportunities for program participants.
- The NRT program will advance transformative efforts that combine interdisciplinary training with innovative professional development activities to educate the next generation of scientists, including those from groups currently under-represented in the field, to solve convergent

research problems in areas of national need, and to assume leadership roles across emerging industries. Additionally, the monitoring and evaluation program for NRT will continue to collect data from existing programs to inform future efforts. Innovations in Graduate Education (IGE), a part of the NRT program, will focus on research into graduate student training, including efforts to recover effectively from the impacts of the COVID-19 pandemic on graduate education. IGE will also support an Innovation Acceleration Hub through which the results of IGE projects can be disseminated to the STEM graduate education community.

- SFS funding will improve the capacity of institutions to provide students with the latest curricular and assessment approaches and experiences available ensuring they are well prepared with cybersecurity skills and knowledge. SFS support will also allow institutions to conduct research to build understanding of the most effective preparation for a variety of cybersecurity professions. In addition, SFS will invest in the cybersecurity education and workforce development component of NSF's Secure and Trustworthy Cyberspace: Education (SaTC:EDU) investment area, including projects that span educational aspects of the frontier between AI and cybersecurity. Focus will be placed on K-12 cybersecurity education, and improving how students from community colleges, veterans, and other groups who have been traditionally underrepresented in their participation in the cybersecurity field are prepared for successful entry and retention in the workforce.
- STEM Education Postdoctoral Research Fellowship piloted as an ARP funded activity in FY 2022. DGE will formally establish this program in FY 2023 to support postdoctoral awards designed to enhance the research knowledge, skills, and practices of recent doctoral graduates in STEM, STEM education, education, and related disciplines, with a goal of advancing their preparation to engage in fundamental and applied research in STEM education.

For more information about GRFP and NRT, see the Major Investments in STEM Graduate Education narrative within the Cross Theme Topics section of the NSF-Wide Investments chapter.

DIVISION OF RESEARCH ON LEARNING IN FORMAL   **$242,580,000**
  AND INFORMAL SETTINGS (DRL)   **+$38,420,000 / 18.8%**

About DRL

DRL invests in foundational research to advance understanding about teaching and learning in STEM, across settings ranging from preK-12 schools to the Nation's science museums. These investments address learning in all STEM fields—including computer science and emerging fields such as data science, QIS, and AI. With a focus on equity, the DRL portfolio addresses the design, implementation, and study of learning environments, models, and online learning platforms intended to enable STEM learning for all students—particularly those who have been underrepresented in STEM—through both formal and informal activities across the STEM ecosystem. Advances in STEM learning ultimately support individuals who pursue STEM careers, as well as the Nation's broader workforce that will increasingly require STEM knowledge. DRL's programs inform and support lifelong access to high-quality STEM learning opportunities.

FY 2023 Summary

Research
- AISL resources will support design, adaptation, implementation, and research on innovative modes of lifelong learning in informal environments such as science museums, community centers, and public media that have been economically challenged and serve vulnerable populations. Emphases will include equity in STEM, workforce development, adult and family learning of STEM, public participation in scientific research, remote/online learning, and climate education.
- DRK-12 focuses on research and development of resources, models, and tools to help U.S. preK-12 students learn STEM, including computer science and emerging fields such as data science, quantum information science, and artificial intelligence. Students benefit from a strong start in STEM education beginning in early childhood. DRK-12 supports research and development of resources for teachers and schools across diverse educational settings, including remote/online learning environments.
- The EDU Core Research (ECR) program supports fundamental research and capacity building initiatives. ECR is managed and funded across all EDU divisions. For a full description, see the EES Division narrative.
- National Artificial Intelligence Research Institutes: EDU will support research on AI in relation to education and the workforce, with an emphasis on Augmented Learning for Individuals with Disabilities. The overall goal of the institutes is to improve learning and education, by incorporating AI into educational technology and anticipating how future workplaces will be

changed by AI. There will be a particular focus on the changing roles of human teachers/educators, mentors and collaborators, and the changing nature of educational systems and workforce needs.

Education
- CSforAll addresses the national need to build computer science education opportunities and teacher preparation at the preK-12 level, as part of building the U.S. economy. CSforAll projects are expected to address equity issues in computer science education, including the participation of girls and women, and other underrepresented groups. In FY 2023, CSforAll will be supported at $10.0 million in EDU, with an additional $14.50 million in support from CISE.

DIVISION OF UNDERGRADUATE EDUCATION (DUE) $291,600,000
                                                                      +$19,480,000 / 7.2%

About DUE

DUE supports excellence in undergraduate STEM education for all students. It achieves this goal by funding projects that will strengthen STEM education at two- and four-year colleges and universities. These projects include efforts to design, develop, and implement high-quality educational experiences, as well as scientific research to understand the effectiveness and impacts of those experiences. DUE investments promote educational innovations across the full range of public and private U.S. institutions of higher education, which can help to increase retention and degree attainment by undergraduates. STEM graduates have more employment opportunities and career options, as well as greater lifetime earning potential. For example, innovative educational programs at community colleges enable students to enter careers in advanced technologies such as additive manufacturing, biotechnology, precision agriculture, nano-optics, and cybersecurity. DUE support also enables STEM majors to enter the K-12 teaching workforce in high-need school districts. In these ways, DUE investments broaden participation in the future STEM workforce and help the Nation meet STEM workforce needs. In FY 2023, DUE will continue a research emphasis, initiated in FY 2022, on the learning and teaching of STEM content at 2-year institutions, which often attract diverse populations of students at various point in their careers.

FY 2023 Summary

<u>Research</u>
- The ECR program supports fundamental research and capacity building initiatives. ECR is managed and funded across all EDU divisions. For a full description, see the EES Division narrative.
- HSI funds enable the improvement of undergraduate education at HSIs and build the capacity for STEM education and STEM education research at HSIs that have previously received little or no funding from NSF. Outreach efforts will continue to seek to engage institutions that are new to NSF.
- IUSE funds enable the study of: increased use of evidence-based educational practices; increased understanding of and gains in diversity, equity, and inclusion in STEM education; advancements in the knowledge base concerning undergraduate research, including course-based research; development or identification of indicators, metrics, and assessments to measure readiness for and progress toward institutional and national improvements in undergraduate STEM education; and educational innovations arising from the mitigation of COVID-19 impacts on undergraduate education. For more information, see the IUSE narrative in the Cross Theme Topics section of the NSF-Wide Investments chapter.

Education
- ATE funding will support understanding and development of effective preparation that will educate the skilled technical workforce, including technicians in advanced technological industries such as advanced manufacturing.
- Noyce funding will invest in teacher preparation and support teacher leaders during completion of a teaching obligation in high-need school districts. Noyce funds also enable the study of effective K-12 STEM pre-service teacher preparation and the retention and development of in-service teachers in high-need school districts. Outreach efforts will continue to seek to engage institutions that are new to NSF and that are MSIs.

H-1B NONIMMIGRANT PETITIONER FEES $158,860,000

In FY 2023, H-1B Nonimmigrant Petitioner Fees are projected to be $158.86 million.

H-1B Nonimmigrant Petitioner Fees Funding
(Dollars in Millions)

	FY 2021 Actual	FY 2022 (TBD)	FY 2023 Request	Change over FY 2021 Actual	
				Amount	Percent
H-1B Nonimmigrant Petitioner Fees Funding	$146.51	-	$158.86	$12.35	8.4%

Beginning in FY 1999, Title IV of the American Competitiveness and Workforce Improvement Act (ACWIA) of 1998 (P.L. 105-277) established an H-1B Nonimmigrant Petitioner Account in the general fund of the U.S. Treasury for fees collected for each petition for alien nonimmigrant status. That law required that a prescribed percentage of funds in the account be made available to NSF for scholarships to low-income STEM students; grants for mathematics, engineering, or science enrichment courses; and systemic reform activities. In FY 2005, Public Law 108-447 reauthorized H-1B funding. NSF was provided with 40 percent of the total H-1B receipts collected. Thirty percent of H-1B receipts (75 percent of the receipts that NSF receives) are to be used for a low-income scholarship program, Scholarships in Science, Technology, Engineering, and Mathematics (S-STEM). Ten percent of receipts (25 percent of the receipts that NSF receives) are designated for support of private-public partnerships in K-12 education through Innovative Technology Experiences for Students and Teachers (ITEST).

Scholarships in Science, Technology, Engineering, and Mathematics (S-STEM)

The S-STEM program began in 1999 under P.L. 105-277. Originally, the program was named Computer Science, Engineering, and Mathematics Scholarships (CSEMS) and supported grants for scholarships to academically talented, low-income students with demonstrated financial need pursuing associate, baccalaureate, or graduate degrees in computer science, computer technology, engineering, engineering technology, or mathematics. Grantee institutions awarded scholarships of up to $2,500 per year for two years to eligible students. The CSEMS activity continued under the American Competitiveness in the 21st Century Act (P.L. 106-313) with a prescribed percentage of H-1B receipts (22 percent) which totaled approximately 59.5 percent of the total H-1B funding for NSF. P.L. 106-313 also amended P.L. 105-277 by increasing the maximum scholarship duration to four years and the annual stipend to $3,125.

Under the Consolidated Appropriations Act, 2005 (P.L. 108-447), the prescribed percentage of H-1B receipts available for the low-income scholarship program was increased to 30 percent (approximately 75 percent of the total H-1B funding for NSF). Eligibility for the scholarships was expanded from the original fields of computer science, engineering, and mathematics to include "other technology and science programs designated by the Director." The maximum annual scholarship award amount was raised from $3,125 to $10,000. Language also was added allowing NSF to use up to 50 percent of funds "for undergraduate programs for curriculum development, professional and workforce development, and to advance technological education." As a result, the program was renamed in 2006 from CSEMS to S-STEM.

- Low-income Scholarship Program: S-STEM. The S-STEM program provides institutions with funds for student scholarships to encourage and enable academically talented low-income U.S. students with unmet financial need to complete an associate, baccalaureate, or graduate degree in fields of science, technology, engineering, or mathematics. Earning these degrees enables the graduates to enter the STEM workforce or STEM graduate school. The program emphasizes the importance of recruiting students to STEM disciplines, mentoring and supporting students through degree completion, and partnering with employers to facilitate student career placement in the STEM workforce.

  Since its inception, the low-income scholarship program has received more than 8,500 proposals from all types of colleges and universities and has made more than 2,300 awards. In addition to scholarships, S-STEM awards also provide funding for student support activities such as faculty mentoring, academic support, curriculum development, leadership development, and internships. These high-impact activities are known to be effective for recruiting and retaining students in high-demand technology-rich fields through graduation and into employment. In FY 2023, in addition to the long-standing scholarship support, all S-STEM projects will continue to conduct activities to inform the accumulation of knowledge about interventions that affect associate or baccalaureate STEM degree attainment by academically talented, low-income U.S. students with unmet financial need. S-STEM projects report much higher retention and graduation rates among their scholarship students than among other STEM majors. As a result, research on S-STEM projects can help the Nation understand effective practices to support STEM degree attainment at scale. To this end, the S-STEM program, through the S-STEM NET solicitation[1], fosters a network of S-STEM stakeholders and further develops the infrastructure needed to generate and disseminate new knowledge, successful practices and effective design principles arising from NSF S-STEM projects nationwide. The program is able to synthesize current achievements and investigate evolving barriers to the success of this student population and disseminate the context and circumstances by which interventions and practices that support graduation of domestic low-income students pursuing careers in STEM are successful. Approximately 90 awards are anticipated in FY 2023, with a continued emphasis on increasing involvement of community colleges, especially Hispanic-serving institutions. S-STEM activities in FY 2023 will leverage efforts in IUSE: EDU, LSAMP, IUSE: HSI, and the IUSE: Two Year College (TYC) program to enhance persistence of students. S-STEM will continue to be a partner in the NSF INCLUDES initiative. S-STEM programming and research also will align with NRT, with the goal of understanding and enhancing effective learning environments and pathways for students on the continuum from two-year to four-year to master's and doctoral degrees.

Private-Public Partnerships in K-12

The American Competitiveness in the 21st Century Act (P.L. 106-313) amended P.L. 105-277 and changed the way petitioner fees were to be expended. P.L. 106-313 directed the remaining 40.5 percent of the total H-1B funding for NSF (15 percent of H-1B receipts) toward K-12 activities involving private-public partnerships in a range of areas such as materials development, student externships, and mathematics and science teacher professional development. The ITEST program was developed as a partnership activity in K-12 to increase opportunities for students and teachers to learn about, experience, and use information technologies within the context of STEM, including information

---

[1] www.beta.nsf.gov/funding/opportunities/scholarships-stem-network-s-stem-net

technology (IT) courses. In FY 2005, P.L. 108-447 reduced the prescribed percentage of H-1B receipts available for private-public partnerships in K-12 to 10 percent (approximately 25 percent of the total H-1B funding for NSF).

- Private-Public Partnerships in K-12: ITEST. The ITEST program invests in K-12 activities that address the ongoing and growing need for STEM professionals and information technology workers in the U.S. and seeks solutions to help ensure the breadth and depth of the U.S. STEM workforce. ITEST funds activities for students and teachers that emphasize mathematics, science, and engineering and computer science careers, and emphasizes the importance of evaluation and research to understand the impact of such activities. The program supports the development, implementation, testing, and scale-up of models, STEM robotics projects, and research studies to improve the STEM workforce and build a student's capacity to participate in the STEM workforce. The solicitation places emphasis on capturing and establishing a reliable knowledge base about the dispositions toward and knowledge about STEM workforce skills in U.S. students.

  Since its inception, the ITEST program has received more than 4,550 grant proposals and made more than 540 awards (including co-funded projects) that allow K-12 students and teachers to work closely with scientists, engineers, and other STEM professionals on extended research projects that promote awareness of STEM careers and interest in pursuing education pathways to those careers. The ITEST program encourages proposals relating to emerging industries such as artificial intelligence, data science, and quantum information science. Funded projects draw on a wide mix of community partnerships, including universities, industry, museums, science and technology centers, and school districts to identify the characteristics that attract a wide and diverse range of young people to STEM careers, especially those students historically underrepresented in those careers. ITEST will make approximately 24-33 awards in FY 2023.

H-1B Financial Activities from FY 2012 - FY 2021
(Dollars in Millions)

	FY 2012	FY 2013	FY 2014	FY 2015	FY 2016	FY 2017	FY 2018	FY 2019	FY 2020	FY 2021

[1] P.L. 108-447 directs that 10 percent of the H-1B Petitioner funds go toward K-12 activities involving private-public partnerships in a range of areas such as materials development, student externships, math and science teacher professional development, etc.

Explanation of Carryover

Within the H-1B account, $137.24 million was carried over into FY 2022. Subject to P.L. 116-260, $60.0 million was rescinded in FY 2021.

Innovation Technology Experiences for Students (iTEST)
- Amount: $6.93 million ($21.93 million carryover less $15.0 million rescinded)

- Purpose: Since NSF typically receives the largest amounts from H-1B visa fees in August and September, there was insufficient time to obligate these funds before the end of the fiscal year.
- Obligation: $4.0 million was committed/obligated in Quarter 1-2, remaining amounts to be obligated in FY 2022 Quarter 3.

Scholarships in Science, Technology, Engineering, and Mathematics (S-STEM)
- Amount: $70.31 million ($115.31 million carryover less $45.0 million rescinded)
- Purpose: Since NSF typically receives the largest amounts from H-1B visa fees in August and September, there was insufficient time to obligate these funds before the end of the fiscal year.
- Obligation: $62.60 million was committed/obligated in Quarter 1-2, remaining amounts to be obligated FY 2022 Quarter 3.
