Science Highlight
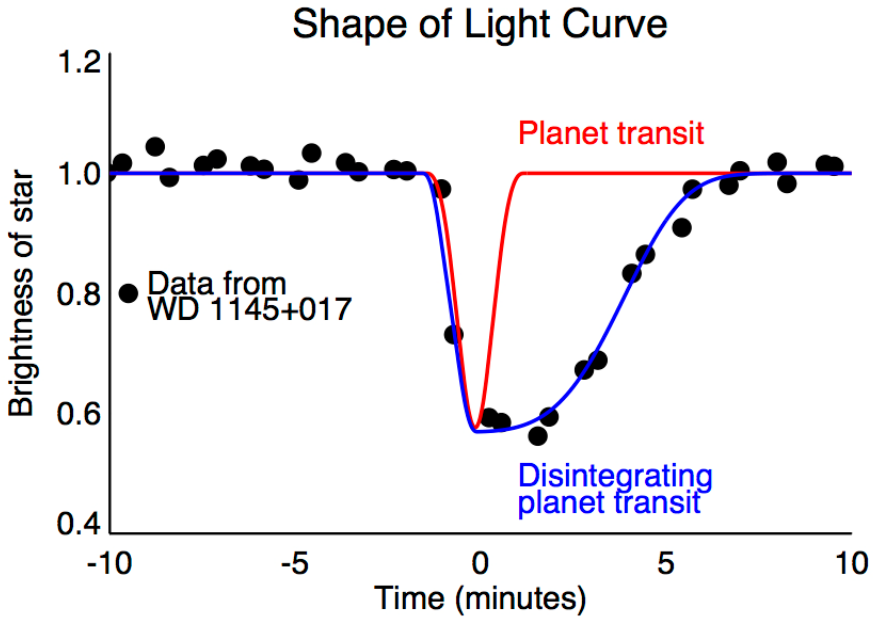
K2 Finds Dead Star Vaporizing a Mini "Planet"

In this artist's conception, a tiny rocky object vaporizes as it orbits a white dwarf star. Astronomers have detected the first planetary object transiting a white dwarf using data from the K2 mission. Slowly the object will disintegrate, leaving a dusting of metals on the surface of the star.
Credits: CfA/Mark A. Garlick



The diagram depicts a model of light curve shapes. The red line indicates the symmetric shape of a hypothetical Earth-size planet transit while the blue line is the asymmetric shape of the tiny disintegrating planet and its comet-like trailing dusty tail. The black dots are measurements recorded by the K2 mission of WD 1145+017.

EXOPLANETS 20/20

Celebrating the last 20 years–and imagining the next 20 years–of exoplanet exploration

October 10-11, JPL Open House with Exoplanet Theme
October 19, NASM What's New in Aerospace Forum: "Exploring Alien Atmospheres."
October 20, Congressional Staffers Lunch and Learn: "The Search for Planets, Habitability, Life in Our Galaxy."
October 20, NASM Exoplanets 20/20–Celebrating 20 Years of Exoplanet Exploration, Imagining the Next 20 Years
October 21, Carnegie Capital Science, "Hunting Planets: Celebrating 20 Years of Exoplanets."
October 22, Reditt "Ask Me Anything" on Exoplanets

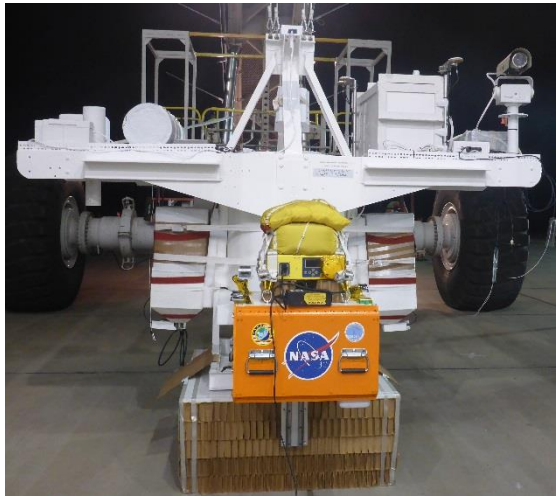
Astrophysics Driving Documents

http://science.nasa.gov/astrophysics/documents

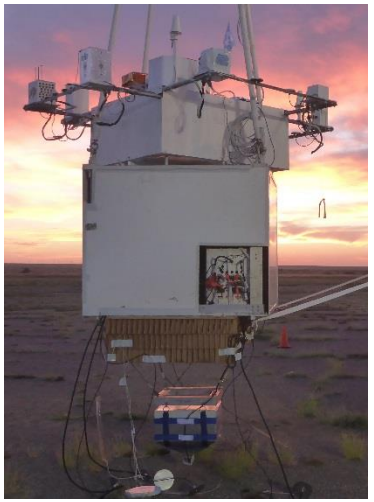
Astrophysics - Big Picture

- **The FY16 budget request provides funding for NASA astrophysics to continue its programs, missions, and projects as planned**
  - The total funding (Astrophysics including JWST) is flat at ~$1.3B through FY20
  - Fully fund JWST to remain on plan for an October 2018 launch
  - Fund continued pre-formulation and technology work leading toward WFIRST; rate of progress depends on FY16 appropriation level
- **The operating missions continue to generate important and compelling science results, and new missions are under development for the future**
  - Chandra, Fermi, Hubble, Kepler/K2, NuSTAR, Spitzer, Swift, XMM-Newton all operating well; next Senior Review is Spring 2016 for FY17+; Suzaku mission ended
  - SOFIA is in prime operations as of May 2014; Senior Review is Spring 2018
  - Missions on track for launch include LISA Pathfinder (2015), ASTRO-H (2015/2016), ISS-CREAM (2016), NICER (2016), TESS (2017), JWST (2018), Euclid (2020)
  - WFIRST being studied, next Explorers being selected (SMEX in 2015, MIDEX in 2017), NASA joining ESA's Athena and ESA's L3 gravitational wave observatory
- **Progress being made against recommendations of the 2010 Decadal Survey**
  - Update to the Astrophysics Implementation Plan released in December 2014
  - NRC Mid Decade Review (with NSF, DOE) underway; Jackie Hewitt (MIT) is chair; report expected in May 2016
  - NASA initiating large mission concept studies as input for 2020 Decadal Survey
- **All ongoing work continuing under FY16 Continuing Resolution**

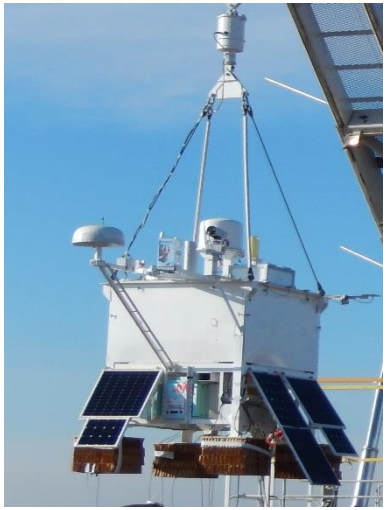
FY 2015 Fort Sumner Balloon Campaign



Test Flight I – Robert Salter, CSBF
Launch Date: September 4, 2015 /14:55 Z
Flight Duration: 7 hrs 45 min



High Altitude Student Platform (HASP) – Dr. Greg Guzik, Louisiana State Univ.
Launch Date: Sept. 7, 2015 /13:47 Z
Flight Duration: 26 hrs 31 min



RaD-X – Dr. Chris Mertens, LaRC
Launch Date: Sept. 25, 2015 /17:05:39 Z
Flight Duration: 21 hrs 52 min

Test Flight II – Bryan Stilwell, CSBF
Launch Date: Oct. 10, 2015 /14:51:47 Z
Flight Duration: 11 hrs 27 min

Upcoming Suborbital Launches

- Fall/Winter FY16 Sounding Rocket Launches @ White Sands NM
  - Planet Imaging Concept Testbed Using a Rocket Experiment (PICTURE); S. Chakrabarti, U. Massachusetts at Lowell (Nov 2015)
  - Diffuse X-ray emission from the Local galaxy (DXL); M. Galeazzi, U. Miami (Dec 2015)
  - Far-UV Off Rowland-circle Telescope for Imaging and Spectroscopy (FORTIS); S. McCandliss, Johns Hopkins U. (Dec 2015)
  - Colorado High-resolution Echelle Stellar Spectrograph (CHESS); K. France, U. Colorado (Feb 2015)
  - Micro-X; E. Figueroa, M.I.T. (Mar 2015)
- Winter FY16 Long Duration Balloon Campaign @ McMurdo Antarctica
  - Gamma-Ray Imager/Polarimeter for Solar Flares (GRIPS); P. Saint-Hilaire, U.C Berkeley (Dec 2015)
  - Stratospheric Terahertz Observatory (STO-II); C. Walker, U. Arizona (Dec 2015)
- Spring FY16 Ultra Long Duration Balloon Campaign @ Wanaka NZ
  - Compton Spectrometer and Imager (COSI); S. Boggs, U.C. Berkeley (Apr 2015)

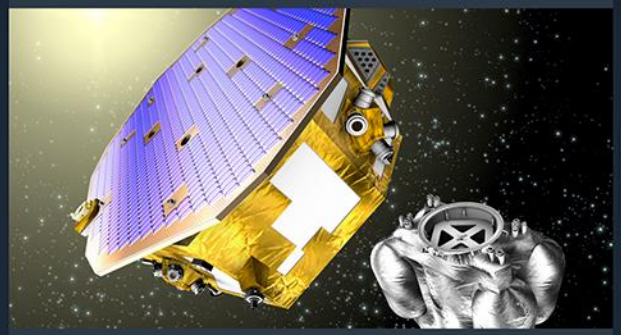
Astrophysics Missions in Development

LISA Pathfinder
12/2015

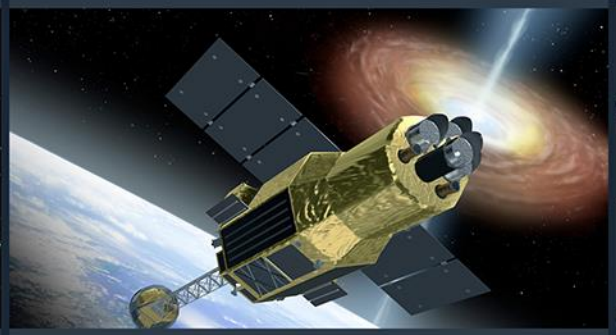
ESA-led Mission



NASA supplied the ST7/Disturbance Reduction System (DRS)

ASTRO-H
11/2015 NET

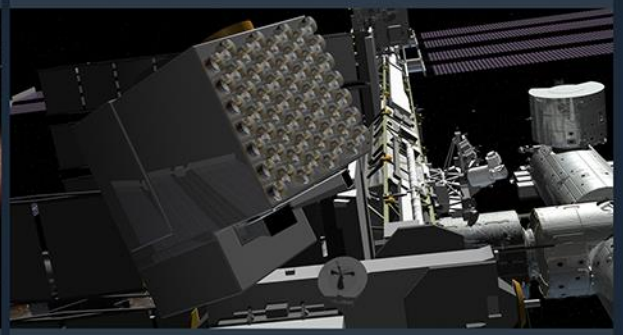
JAXA-led Mission



NASA supplied the Soft X-ray Spectrometer (SXS) instrument

NICER
8/2016

NASA Mission



Neutron Star Interior Composition Explorer

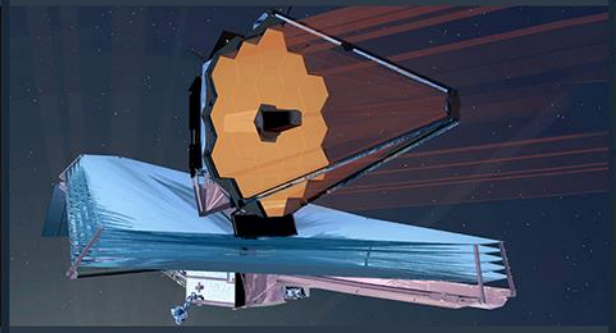
TESS
8/2017

NASA Mission

Transiting Exoplanet Survey Satellite

JWST
10/2018

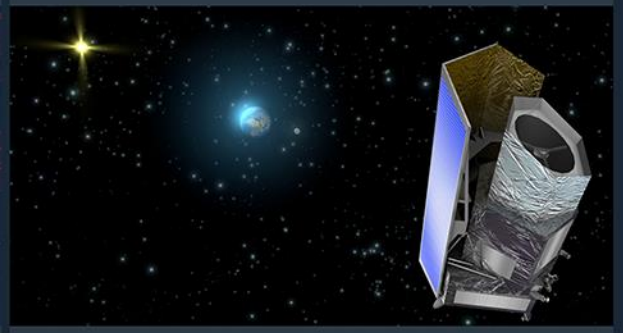
NASA Mission



James Webb Space Telescope

Euclid
2020

ESA-led Mission



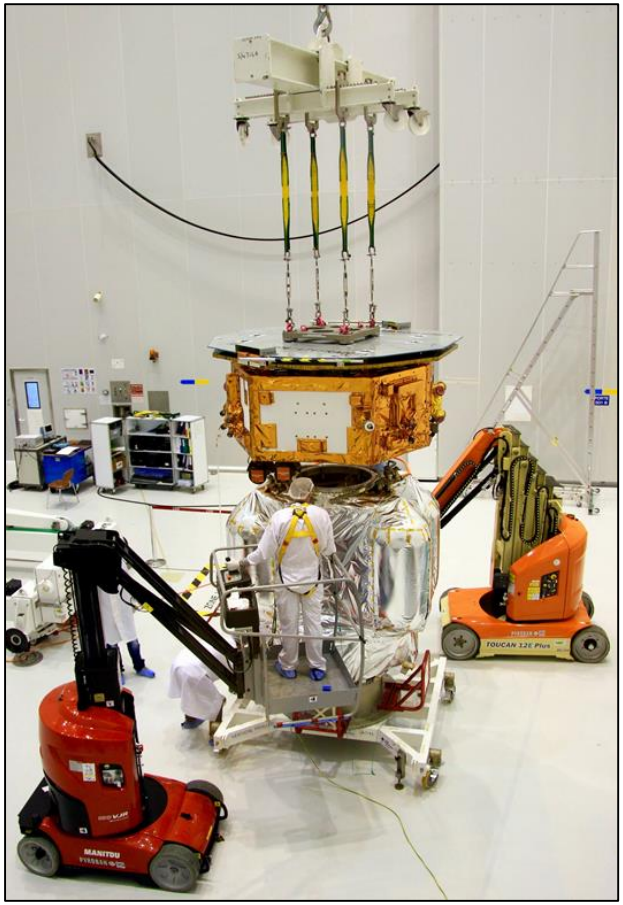
NASA is supplying the NISP Sensor Chip System (SCS)

ST-7/LISA Pathfinder
ST-7/Disturbance Reduction System (DRS)

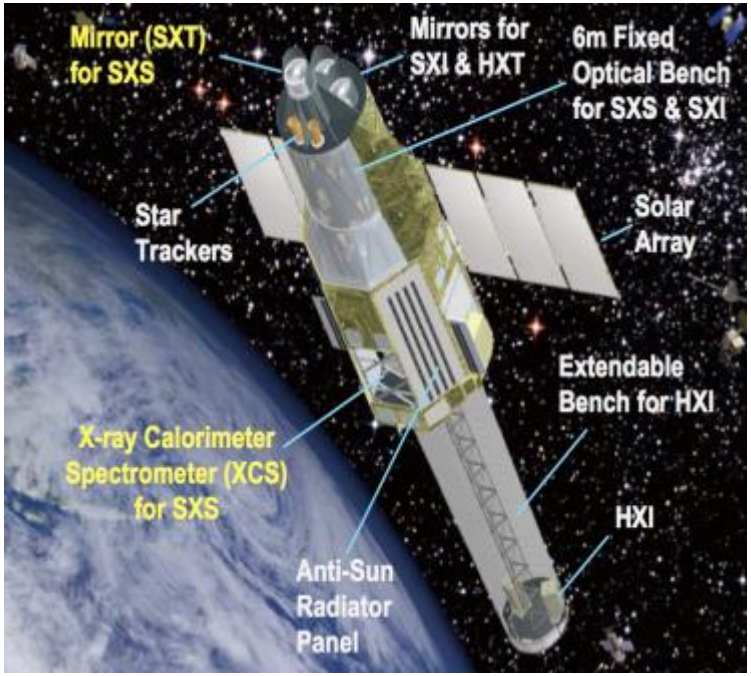
- ESA Mission with NASA Collaborating
- Project Category: 3 Risk Class: C
- DRS flies on the ESA LISA Pathfinder spacecraft
- Sun-Earth L1 halo orbit
- Drag-free satellite to offset solar pressure
- Payload delivery: July 2009 – COMPLETE
- Launch date: December 2, 2015
- LPF prime mission: 7 months
- Data Analysis: 12 months

CURRENT STATUS:

- LISA Pathfinder shipped to Guiana Space Port, Kourou, French Guiana-on October 8
- Spacecraft final closeouts are ongoing
- Launch December 2, 2015 (UT)
- Extended mission being discussed



ASTRO-H
Soft X-ray Spectrometer and Soft X-ray Telescope Mirrors



- **Explorer Mission of Opportunity**
- **PI**: R. Kelley, Goddard Space Flight Center
- **Launch Date**: NET Jan 2016 on JAXA H-IIA
- **Science Objectives**: Study the physics of cosmic sources via high-resolution X-ray spectroscopy. The SXS will enable a wide range of physical measurements of sources ranging from stellar coronae to clusters of galaxies.
- **Operations**: Prime Mission is 3 years

CURRENT STATUS

The U.S. is providing instrument contributions to the JAXA ASTRO-H mission.

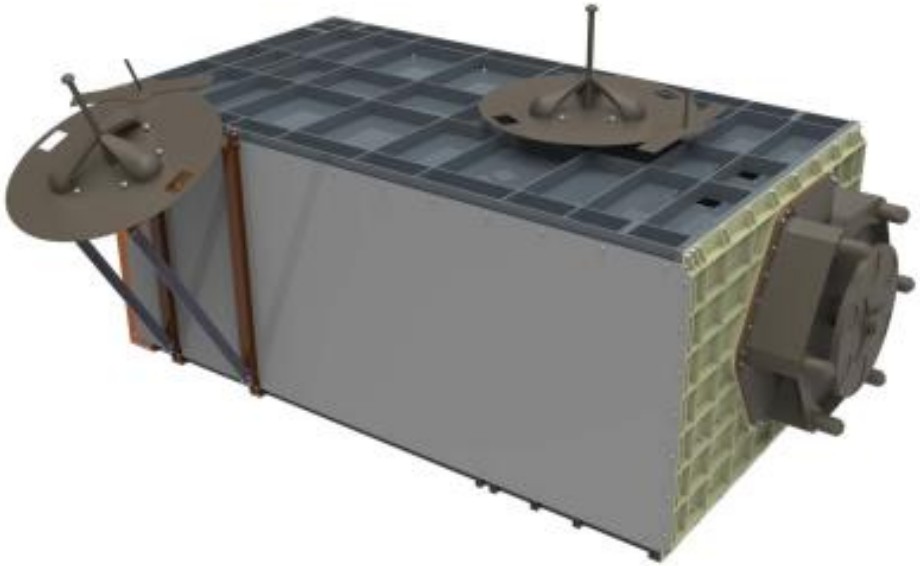
- Soft X-ray telescope mirrors (SXT-S and SXT-I) – Both delivered.
- X-ray Calorimeter Spectrometer Insert (CSI), including Adiabatic De-magnitization Refrigerator (ADR) and ADR Controller
- Aperture Assembly
- X-ray Electronics Box (X-box)
- High Temperature Superconducting Leads

- All U.S. hardware has been integrated onto the spacecraft.
- Successfully completed spacecraft level environmental testing

UPCOMING EVENTS:

- Early November - Final spacecraft comprehensive performance test
- Late November –shipment to Tanegashima launch site
- Late NET November 2015 (TBC) – Launch
- Late Spring 2016 (TBC) – Cycle 1 GO call

CREAM
Cosmic Ray Energetics and Mass



PI: Eun-Suk Seo.

Mission: Cosmic ray particle detector astrophysics.

Science goal: Measure cosmic ray particle energy spectra rom 10 exp12 to 10 exp15 eV over elemental range of protons to iron.

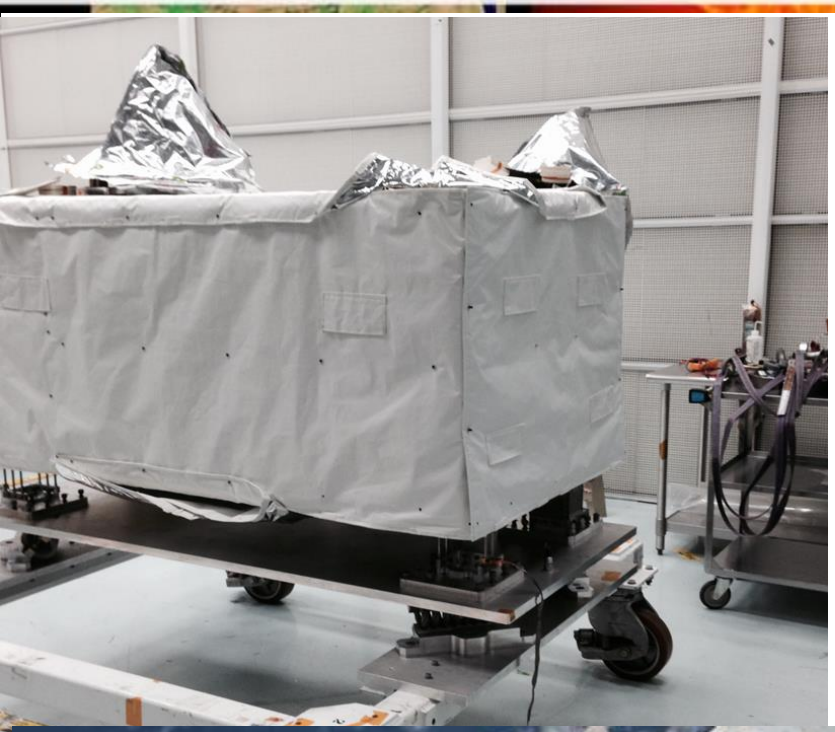
Instruments: Tungsten/scintillating fiber Calorimeter, Silicon charge detector, Top and Bottom counting detectors, Boronated Scintillator detector.

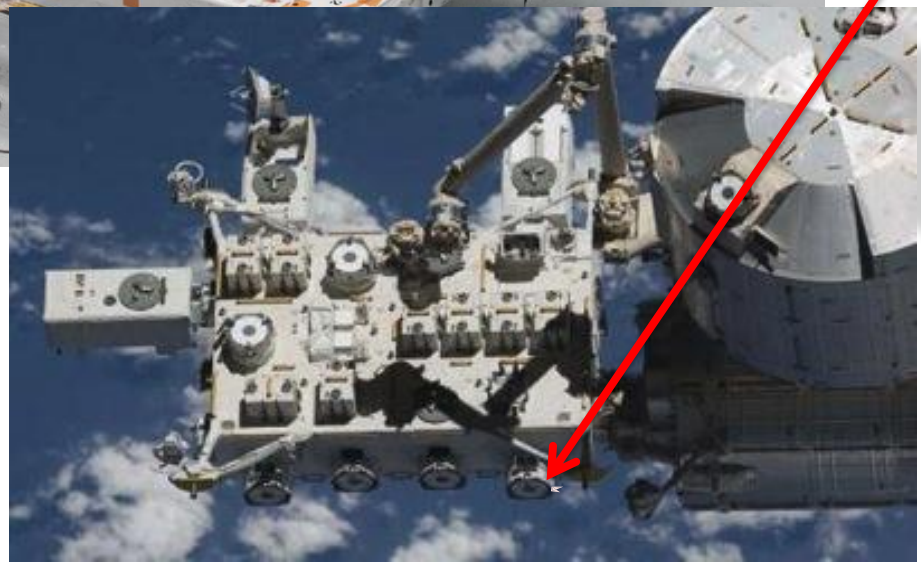
Operations: 2016 launch with 1 year minimum required, 3 years desired.

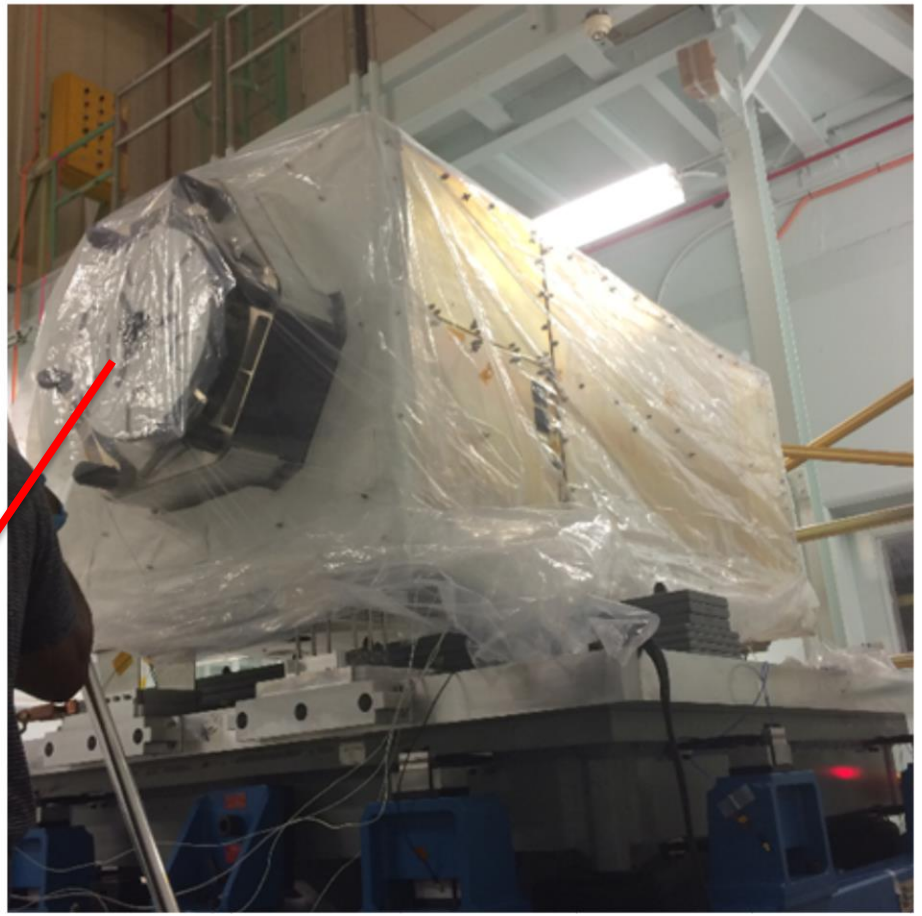
CURENT STATUS:

- Suborbital class research project for flight operations on the International Space Station (ISS) Japanese Exposed Facility (JEM-EF).
- Major partners:
  - PI and science lead: Univ. of MD
  - Project Management : NASA WFF
  - Other science collaborators: Sungkyunkwan National Univ. (South Korea, Kyungpock National Univ. (South Korea), Northern Kentucky Univ., Penn State Univ.
- Tentative launch date: August 2016 on SpaceX-11 to the ISS.
- KDP-C: April 2013
- KDP-D: September 2014
- Delivered to KSC: August 2015

Cosmic Ray Energetics and Mass (CREAM)



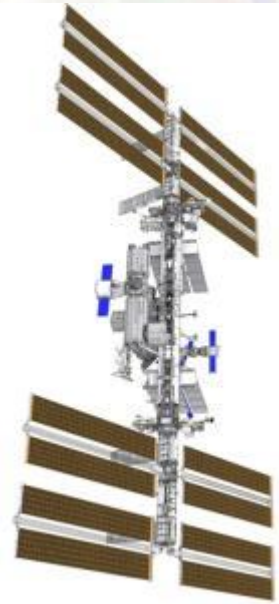


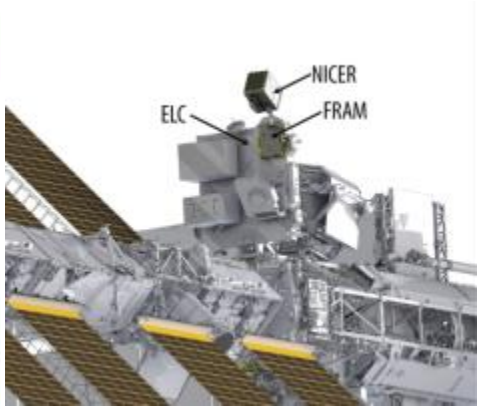


NICER

Neutron Star Interior Composition Explorer

Intl Space Station (ISS)





- **Explorer Mission of Opportunity**
- **PI:** Keith Gendreau, GSFC
- **Launch:** August 2016 on Space-X Falcon 9
- **Science Objectives:** Perform high-time-resolution and spectroscopic observations of neutron stars in the .2-12 keV energy range to study the physics of ultra-dense matter in the core of neutron stars.
- **Instrument:** X-ray Timing Instrument uses X-ray concentrators and detectors to detect X-ray photons and return energy and time of arrival.
- **Platform:** Located externally on the ISS, ExPRESS Logistics Carrier 2, Starboard 3 site
- **Operations:** Operated on a non-interference basis for 18 months
- **SEXTANT** for Pulsar navigation demo funded by NASA's Space Technology Mission Directorate

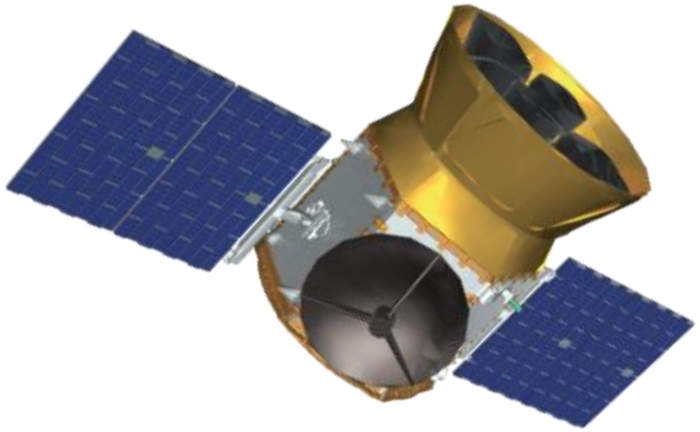
CURRENT STATUS:

- All subsystems/sub-assemblies have completed fabrication and environmental testing
- The NICER project has now started final payload integration

UPCOMING EVENTS:

- Dec 10-11: Pre-environmental Review
- Jan 21 2016: KDP-D
- February 2016: Start of payload environmental testing
- August 2016 (TBC): Launch

TESS
Transiting Exoplanet Survey Satellite



Standard Explorer (EX) Mission

PI: G. Ricker (MIT)

Mission: All-Sky photometric exoplanet mapping mission.

Science goal: Search for transiting exoplanets around the nearby, bright stars.

Instruments: Four wide field of view (24x24 degrees) CCD cameras with overlapping field of view–operating in the Visible-IR spectrum (0.6-1 micron).

Operations: NLT June 2018 launch with a 3-year prime mission including 2 years of spacecraft operations and an additional 1 year ground-based observations and analysis.

CURRENT STATUS:

- Downselected April 2013.
- Major partners:
  - PI and science lead: MIT
  - Project management: NASA GSFC
  - Instrument: Lincoln Laboratory
  - Spacecraft: Orbital Science Corp
- Tentative launch readiness date NLT June 2018.
- High-Earth elliptical orbit (17 x 58.7 Earth radii).
- Development progressing on plan.
  - Systems Requirement Review (SRR) successfully completed on February 12-13, 2014.
  - Preliminary Design Review (PDR) successfully completed Sept 9-12, 2014.
  - Confirmation Review, for approval to enter implementation phase, successfully completed October 31, 2014.
  - CDR held August 4-7, 2015
  - Delta CDR planned for ~December 2015

JWST Mission Status

- Manufacturing coming to a close
  - 2 of 5 Sunshield layers finished, 3 others in fabrication
  - Flight spare cryocooler compressor assembly expected in February
- Many activities are deep into Integration and Test (I&T):
  - Telescope Structure delivered, optics integration starting soon
  - Pathfinder telescope + flight Aft Optics in 2nd cryo test
  - ISIM starting CV3 imminently
  - Spacecraft bus structure delivered to I&T
  - Flight cryocooler compressor assembly in acceptance testing
- Commissioning planning moving into high gear

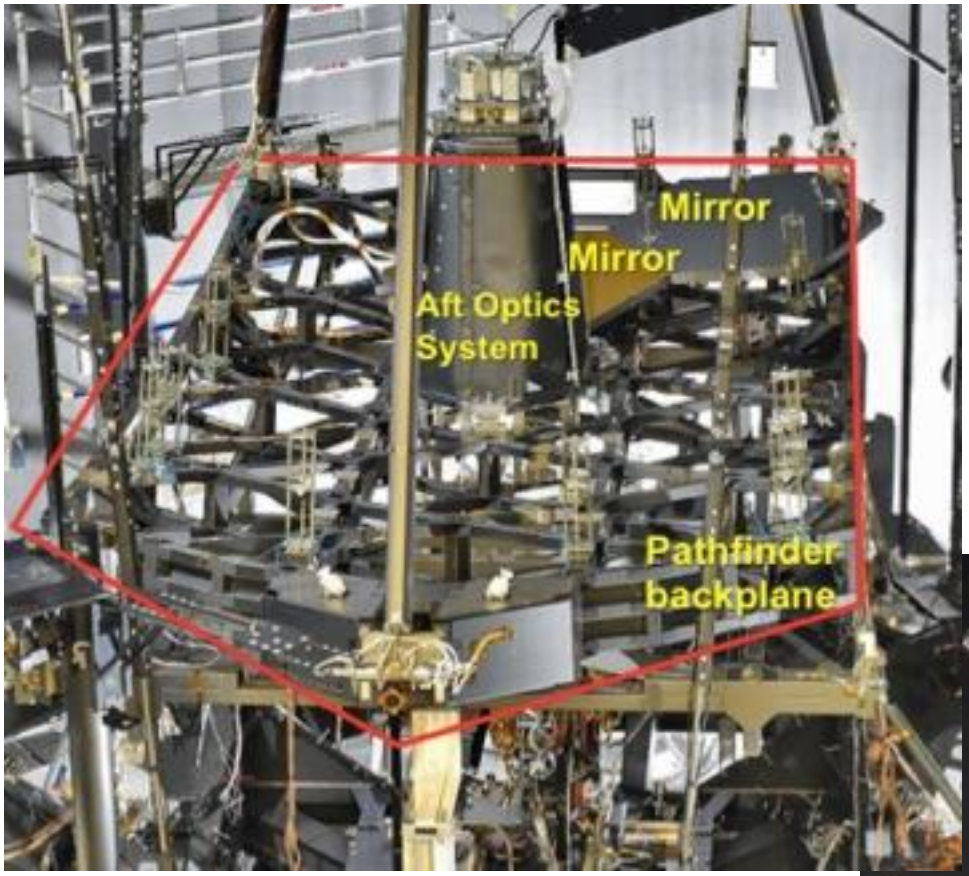
JWST Images

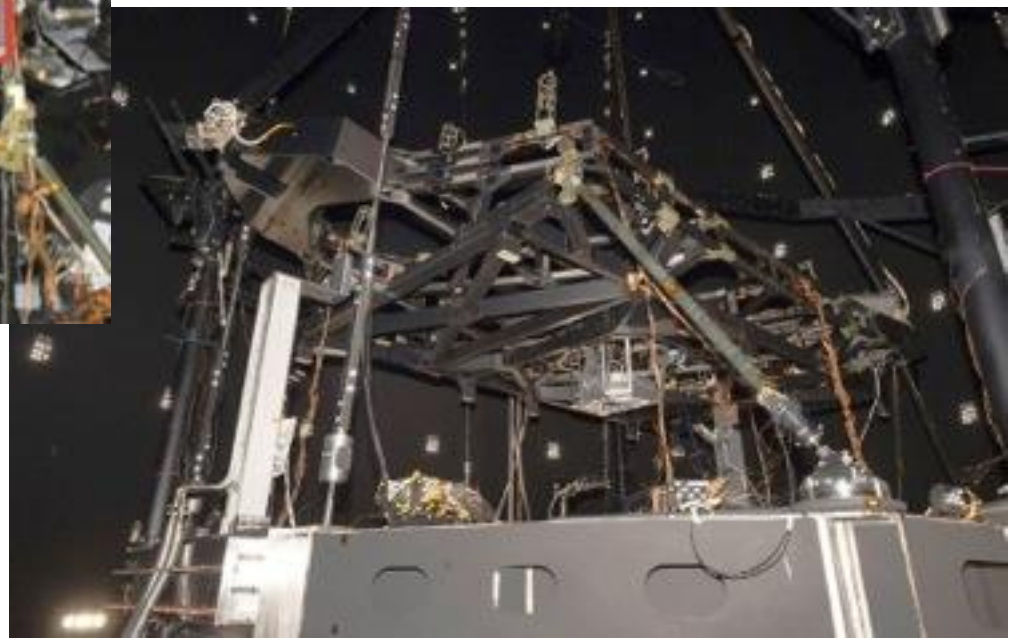
Full-Scale Engineering Model Sunshield

Flight Aft UPS

Test Rim/Hub structure

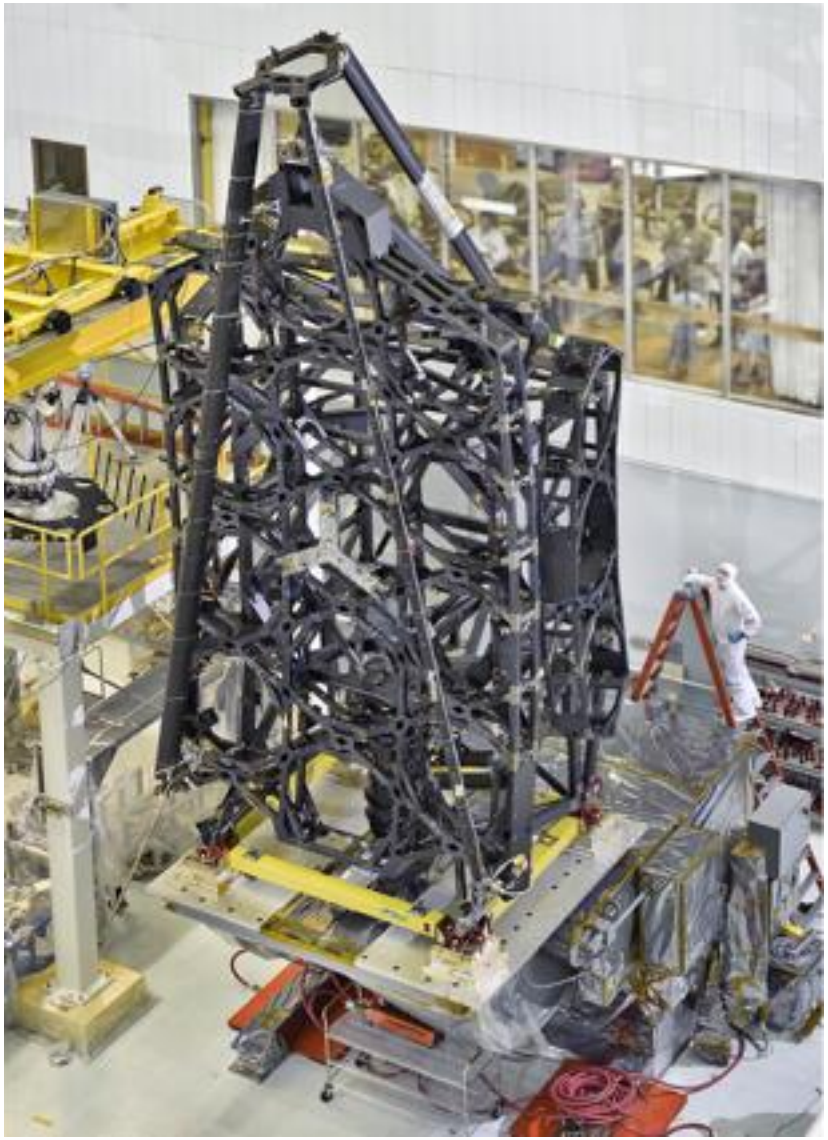
JWST Images



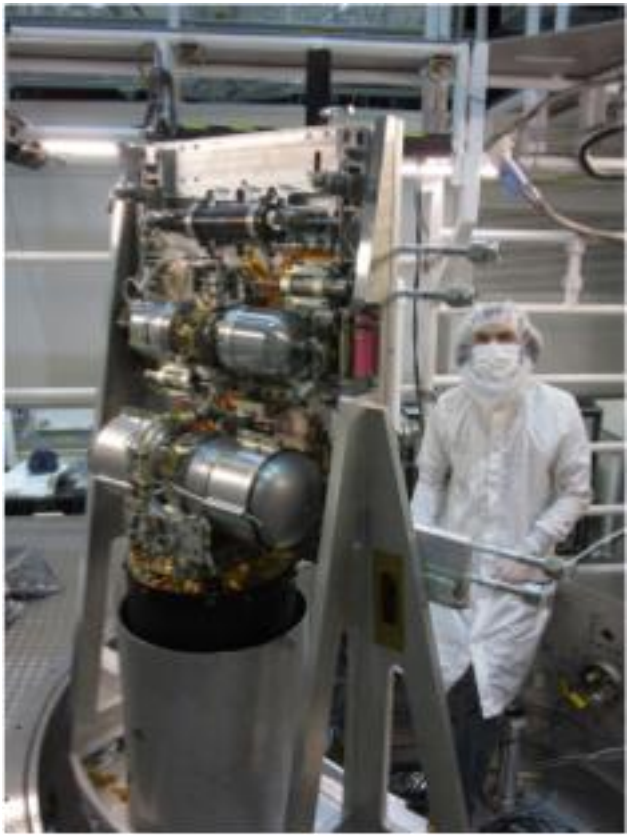


OGSE2 test set up: Pathfinder Telescope and flight AOS

JWST Telescope Structure

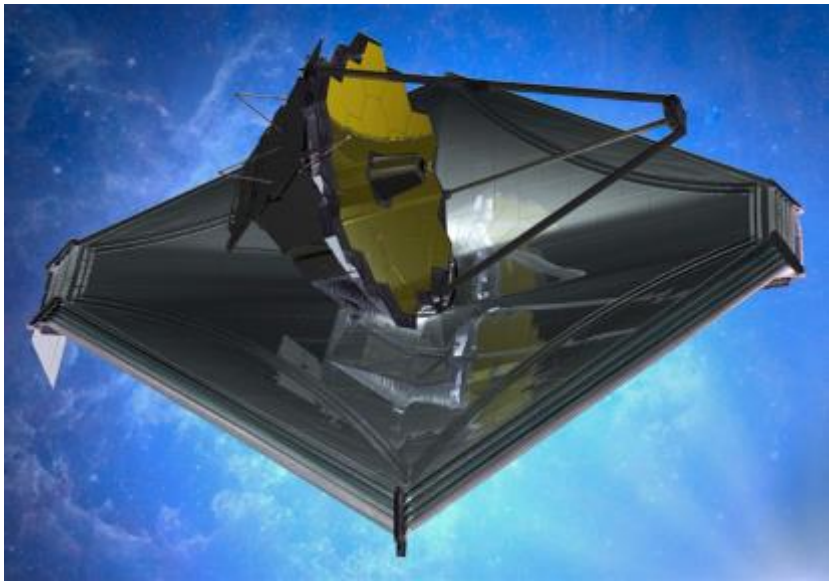


JWST Flight Crycooler



Compressor Assembly and deployable refrigerant line

JWST
James Webb Space Telescope



Large Infrared Space Observatory

Top priority of 2000 Decadal Survey

Science themes: First Light; Assembly of Galaxies; Birth of Stars and Planetary Systems; Planetary Systems and the Origins of Life

Mission: 6.5m deployable, segmented telescope at L2, passively cooled to <50K behind a large, deployable sunshield

Instruments: Near IR Camera, Near IR Spectrograph, Mid IR Instrument, Near IR Imager and Slitless Spectrograph

Operations: 2018 launch for a 5-year prime mission

Partners: ESA, CSA

FY2015 Accomplishments

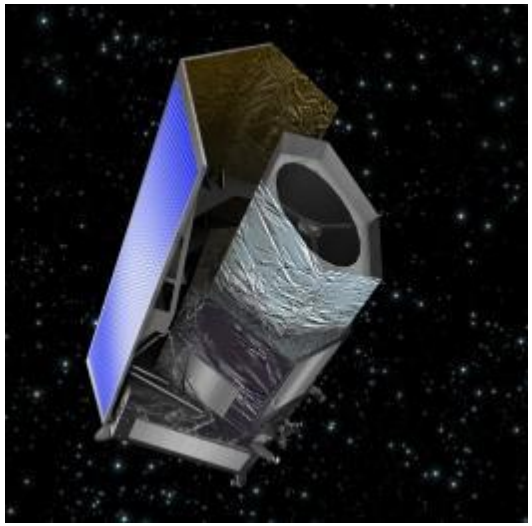
- Completed instrument hardware replacements, and prepared ISIM for its final test before integration with the telescope
- Completed MIRI cryocooler flight units
- Conducted tests at JSC in preparation for 2016 full telescope plus ISIM test
- Delivered spacecraft bus structure to I&T

FY2016 Plans

- Assemble the Telescope
- Complete ISIM testing and integrate with the telescope
- Complete sunshield membrane manufacturing
- Begin integration of spacecraft bus components (e.g. electronics, propulsion) with the spacecraft bus structure

Euclid

A visible and near-infrared telescope to explore cosmic evolution



- **ESA Cosmic Vision 2015-2025 Mission**, M-Class with NASA participation.
- 1.2-m mirror, visible & near-IR images, spectra
- **Launch Date**: December 2020
- **Science Objectives**:
  - Euclid will look back 10 billion years into cosmic history.
  - Probe the history of cosmic expansion (influenced by dark energy and dark matter) and how gravity pulls galaxies together to form the largest structures.
  - The shapes of distant galaxies appear distorted because the gravity of dark matter bends their light (gravitational lensing). Measuring this distortion tells us how the largest structures were built up over cosmic time.
  - Measuring how strongly galaxies are clumped together tells us how gravity influences their motions, and how dark energy has affected the cosmic expansion.

CURRENT STATUS:

- Currently in implementation phase.
- ~50 U.S. scientists are members of the Euclid Science Team that will analyze the data, and make maps of the sky.
- The qualification detectors from the detector vendor are currently being tested at GSFC's Detector Characterization Lab.
- NASA has all contracts in place at the detector vendor, with the last one expected to be in place in November 2015.
- End of detector engineering phase was delayed by ~23 months, delivery of NASA-provided sensor systems will slip by same amount
- The Euclid Mission PDR was held October 20, 2015.
- NASA rebaseline will be in January 2016 (TBC).

Astrophysics Missions in Pre-Formulation

SMEX / MO – 2019/2020
see next chart for list of selections

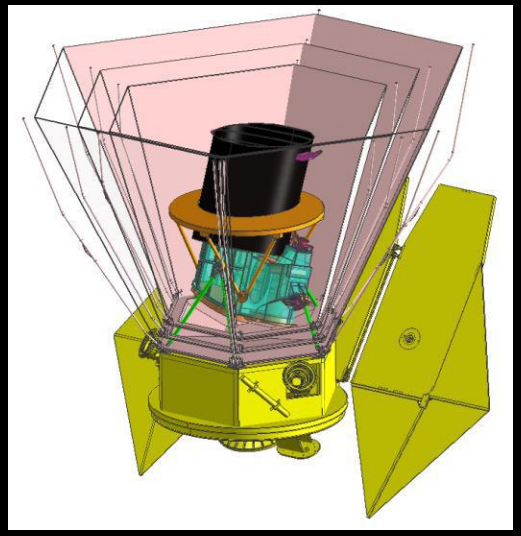
MIDEX / MO – 2022/2023

WFIRST-AFTA – NLT 2026

Athena – 2028

All launch dates notional

Astrophysics SMEX/MO Missions in Formulation



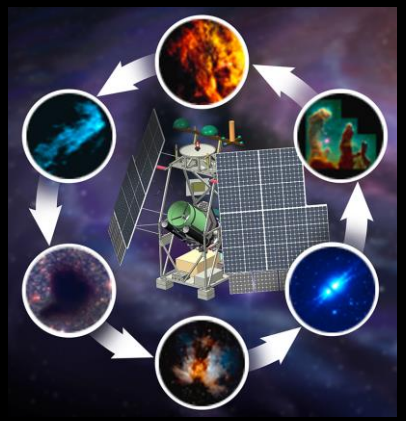
SPHEREx
PI: J. Bock, Caltech
An All-Sky Near-IR Spectral Survey

PRAXyS
PI: K. Jahoda, GSFC
Polarimeter for Relativistic Astrophysical X-ray Sources

IXPE
PI: M. Weisskopf, MSFC
Imaging X-ray Polarimetry Explorer

PI: A. Lee, UC Berkeley
US Participation in JAXA's LiteBIRD CMB Polarization Survey

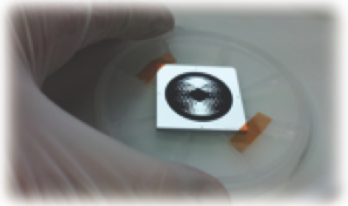
PI: C. Walker, U. Arizona
GUSTO: Gal/Xgal U/LDB Spectroscopic - Stratospheric Terahertz Observatory



Executive Summary

- Huge progress on WFIRST over the past two years
- SDT studies & NRC Harrison committee report confirm that WFIRST-AFTA exceeds NWNH requirements in all areas.
- $107M in FY14 & 15 has enabled major steps forward and NRC-Harrison committee recommendations have been addressed (H4RGs, coronagraph, mission design). Planning against $56M in FY16, exact amount depends on appropriations.
- Coronagraph on track, technology development on schedule. Wide Field detector technology development on schedule
- MCR scheduled for Dec 8-9. Prepared for start of formulation (KDP-A) as early as January 2016.
- SDT 2014 & 15 studies completed
- Preparatory Science teams selected
- Pasadena conferences held
- Special session at AAS's & IAU
- Science team NRA released
- Industry study RFIs received
- Significant international interest (Canada, ESA, Japan, Korea)

WFIRST H4RG-10



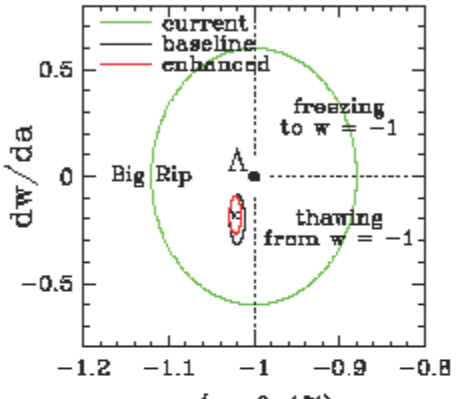
Shaped-Pupil Coronagraph Mask

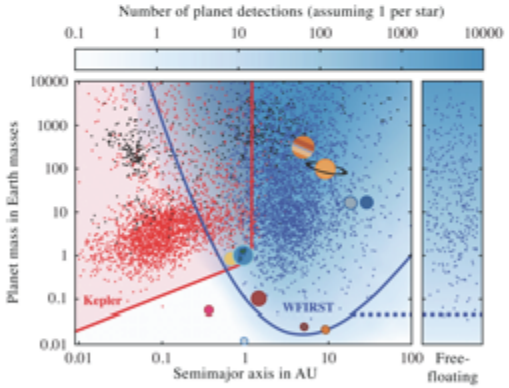
Path Forward

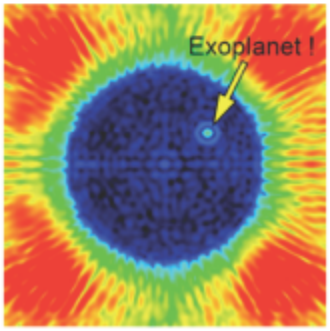
- Mission Concept Review schedule for Dec 8-9.
- Industry study solicitation to be released.
- Developing KDP-A documentation and products per NPR 7120.5E (control plans, descope plan, design reference, Formulation Agreement, etc.)
- Proposals for WFIRST Science Team due October 15; selection around Dec 1.
- Science Investigation Team kick-off planned for the first week of February.
- Award of industry studies in early 2016.
- Prepared for the start of formulation (KDP-A) as early as January 2016.
- Acquisition Strategy Meeting (ASM) in spring; finalizes acquisition approach.
- Systems Requirements Review/Mission Design Review (SRR/MDR) to be held prior to end of Formulation Phase.
- At the conclusion of the Formulation Phase, KDP-B and transition to development.

Summary

- Over the past two years, increased funding has enabled significant progress in technology maturation as well as additional fidelity in the design reference mission.
- WFIRST with the 2.4-m telescope and coronagraph provides an exciting science program, superior to that recommended by NWNH and also advances exoplanet imaging technology (the highest ranked medium-class NWNH recommendation).
- Great opportunity for astronomy and astrophysics discoveries. Broad community support for WFIRST.
- Key development areas are anchored in a decade of investments in JPL's HCIT and GSFC's DCL.
- Great progress made in pre-formulation, ready for KDP-A and launch in mid-2020s.







Implementing the 2010 Decadal Survey

- The 2010 Decadal Survey recommended a coordinated program of research, technology development, ground-based facilities, and space-based missions to address the most compelling science questions.
- The budget environment does not allow the recommendations of the 2010 Decadal Survey to be implemented as written.
  - Choices have been made.
  - NASA Astrophysics has kept the community informed of our progress through Town Halls, Implementation Plan Updates, and Newsletters.
  - NASA Astrophysics obtains frequent community input via advisory committees and community groups.
- NASA Astrophysics is addressing all of the recommendations in the 2010 Decadal Survey and substantial progress is being made.
  - The James Webb Space Telescope (JWST) remains on schedule and within budget for a launch in October 2018.
  - Preformulation for the Wide-Field Infrared Survey Telescope (WFIRST) using Astrophysics Focused Telescope Assets (AFTA) is well underway.
  - Explorer AOs are being issued every 2-3 years.
  - Highly leveraged partnerships with the European Space Agency (ESA) are advancing the science of LISA and IXO.
  - Investments in technology, suborbital investigations, core research, and other Decadal Survey priorities are yielding science in this decade and preparing for the next decade.
- The Mid-Term Review is underway.
  - http://sites.nationalacademies.org/SSB/CurrentProjects/SSB_161177

Progress Toward Decadal Survey Priorities

The NASA FY15 Appropriation, the President's FY16 Budget Request, and the notional out year budget planning guidance in the President's FY16 Budget Request, support:	
Complete JWST	JWST remains within budget guidelines and on track for an October 2018 launch.
Large-scale 1. WFIRST	Preformulation and focused technology development for WFIRST-AFTA (a 2.4m version of WFIRST with a coronagraph) are underway to enable a new start. Budget line established for an Astrophysics Decadal Strategic Mission.
Large-scale 2. Augmentation to Explorer Program	Astrophysics Explorers planned budget increased to support cadence of four AOs per decade including SMEX AO in Fall 2014 and MIDEX AO in late 2016/early 2017.
Large-scale 3. LISA	Discussing partnership on ESA's L3 gravitational wave observatory and participating in ESA-led assessments in 2014-2015. Strategic astrophysics technology (SAT) investments plus support of LISA Pathfinder.
Large-scale 4. IXO	Pursuing a partnership on ESA's L2 Athena X-ray observatory; the Athena study phase, with U.S. participation, is underway. Strategic astrophysics technology (SAT) investments.
Medium-scale 2. Inflation Probe Technology Development Prog	Balloon-borne investigations plus strategic astrophysics technology (SAT) investments. Studying partnership on JAXA's LiteBIRD.

Progress Toward Decadal Survey Priorities

The NASA FY15 Appropriation, the President's FY16 Budget Request, and the notional out year budget planning guidance in the President's FY16 Budget Request, support:	
Medium-scale 1. New Worlds Technology Development Program	Focused technology development for a coronagraph on WFIRST, strategic astrophysics technology (SAT) investments, and exoplanet probe mission concept studies. Established partnership with NSF to develop extreme precision Doppler spectrometer as facility instrument. Exozodi survey using LBTI.
Small-scale. Research Program Augmentations	Increased annual R&A budget by 10% from FY10 to FY12 and another 10% from FY14 to FY16. Within R&A: established Theoretical and Computational Astrophysics Networks (TCAN) program with NSF; funding available for astrophysics theory; funding available for lab astrophysics; funding available for suborbital payloads.
Small-scale. Intermediate Technology development Augmentation	Established competed Strategic Astrophysics Technology (SAT) program element; directed technology funding for WFIRST and other large-scale decadal priorities (e.g., WFIRST coronagraph, Athena).
Small-scale. Future Ultraviolet-Visible Space Capability	Strategic Astrophysics Technology (SAT) and Astrophysics R&A (APRA) investments; mission concept studies.
Small-scale. SPICA (U.S. contribution to JAXA-led)	Not supported as a strategic contribution; candidate for Explorer Mission of Opportunity.

Response to Recommendations: Core Research

- Core R&A Funding includes
  - Astrophysics Research and Analysis (APRA): all years
  - Astrophysics Data Analysis Program (ADAP): all years
  - Astrophysics Theory Program (ATP): all years
  - Exoplanet Research Program (XRP), was Origins of Solar Systems (OSS): all years
  - Theoretical and Computational Astrophysics Networks (TCAN): FY14+
  - Nancy G. Roman Technology Fellowships (RTF): FY12+
  - Long Term Space Astrophysics (LTSA): through FY09, then into ADAP
  - Beyond Einstein Foundation Science (BEFS): through FY06, then into ATP
  - Does not include WFIRST Preparatory Science (WPS) or mission-funded theory

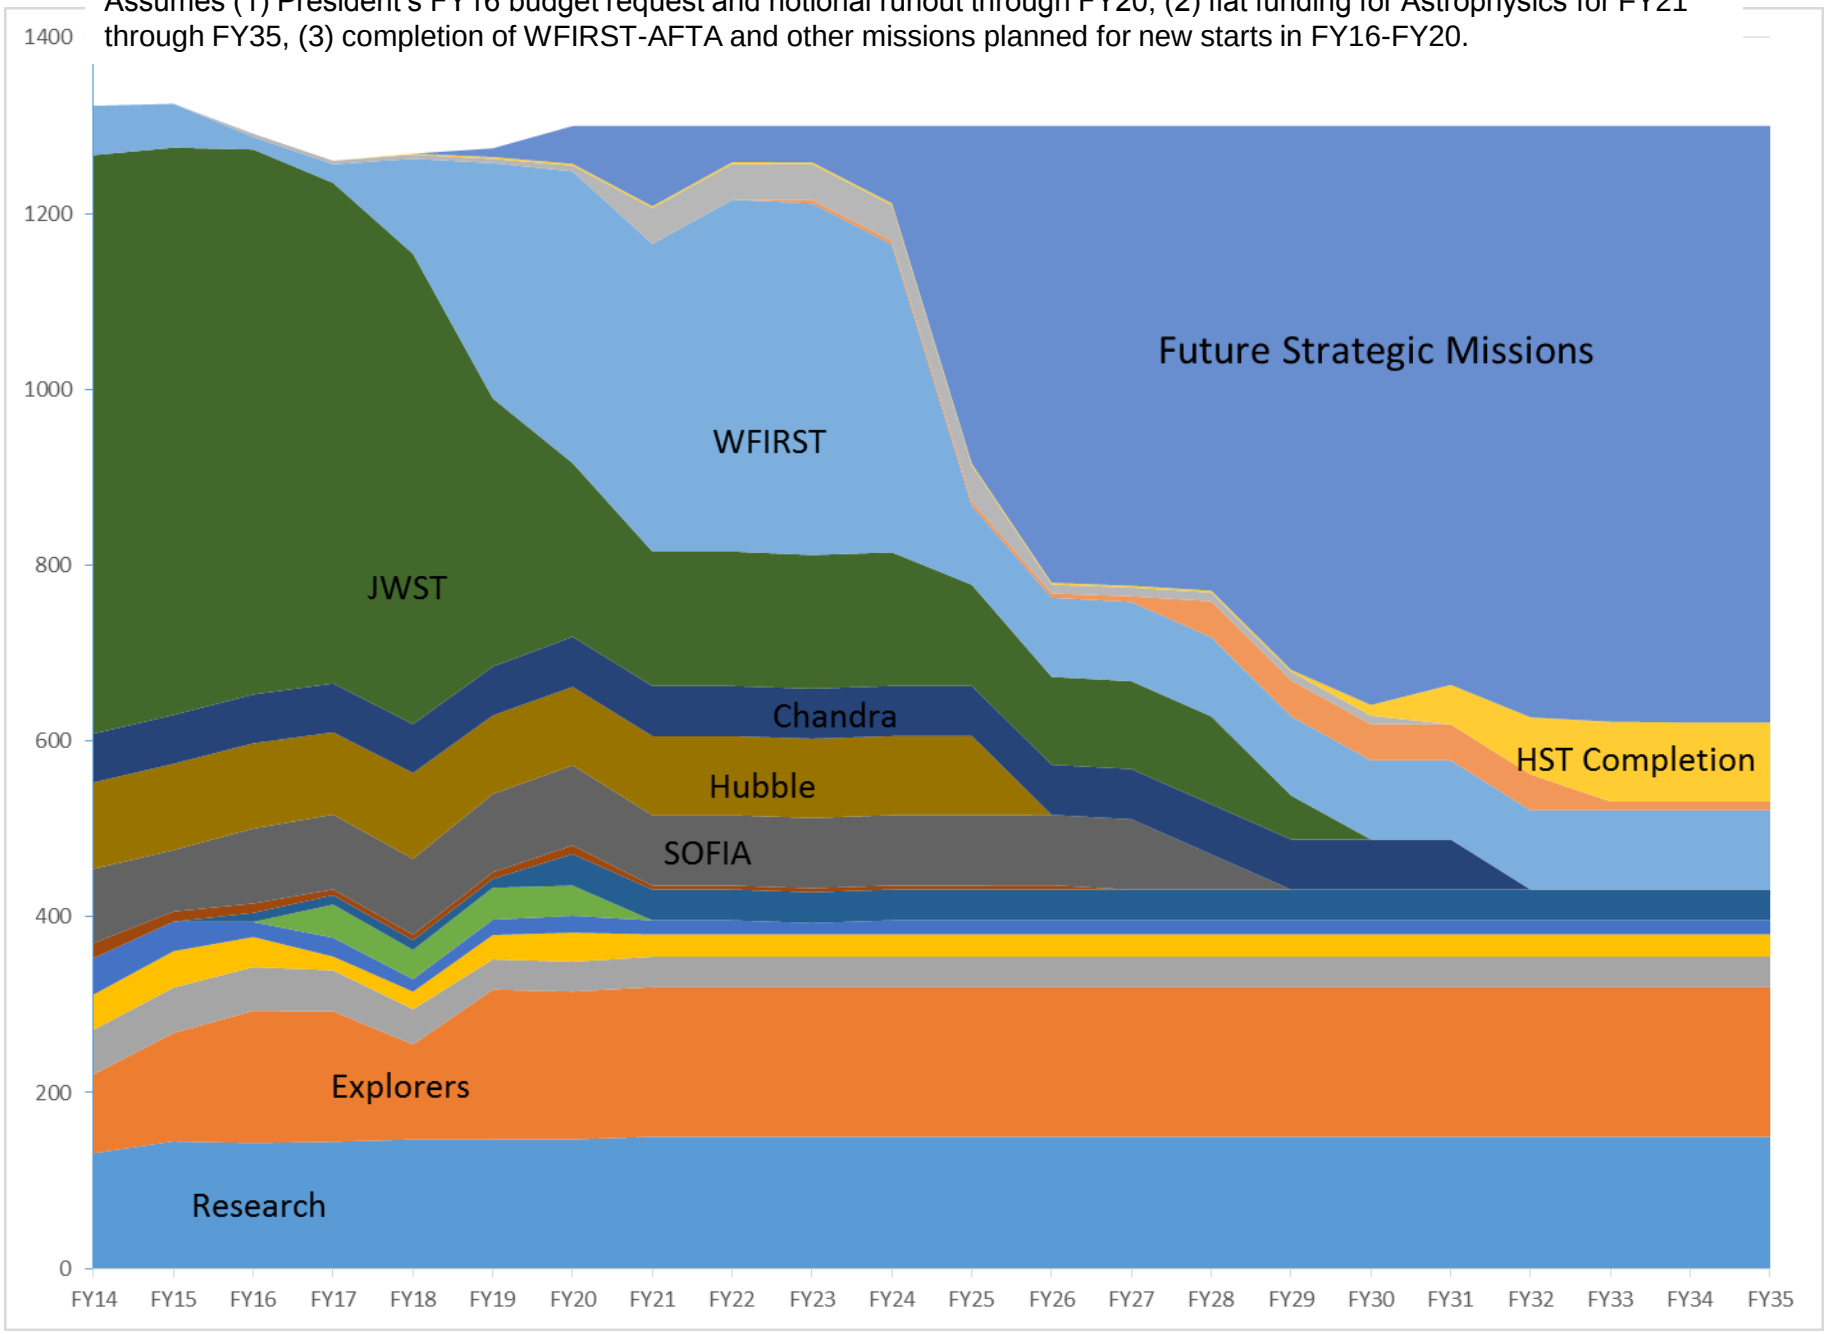
Assumes (1) President's FY16 budget request and notional runout through FY20, (2) flat funding for Astrophysics for FY21 through FY35, (3) completion of WFIRST-AFTA and other missions planned for new starts in FY16-FY20.



Preparing for the 2020 Decadal Survey
Large Mission Concepts

- Study 3-4 large mission concepts as candidate prioritized large missions
  - Science case
  - Technology assessment
  - Design reference mission with strawman payload
  - Cost assessment
- Charge to the PAGs (January 2015)
  - “I am charging the Astrophysics PAGs to solicit community input for the purpose of commenting on the small set [of large mission concepts to study], including adding or subtracting large mission concepts.”

Preparing for the 2020 Decadal Survey
Large Mission Concepts

The initial short list (in alphabetical order):

- **FAR IR Surveyor** – The Astrophysics Visionary Roadmap identifies a Far IR Surveyor as contributing through improvements in sensitivity, spectroscopy, and angular resolution.
- **Habitable-Exoplanet Imaging Mission** – The 2010 Decadal Survey recommends that a habitable-exoplanet imaging mission be studied in time for consideration by the 2020 Decadal Survey.
- **UV/Optical/IR Surveyor** –The Astrophysics Visionary Roadmap identifies a UV/Optical/IR Surveyor as contributing through improvements in sensitivity, spectroscopy, high contrast imaging, astrometry, angular resolution and/or wavelength coverage. The 2010 Decadal Survey recommends that NASA prepare for a UV mission to be considered by the 2020 Decadal Survey.
- **X-ray Surveyor** – The Astrophysics Visionary Roadmap identifies an X-ray Surveyor as contributing through improvements in sensitivity, spectroscopy, and angular resolution.

Preparing for the 2020 Decadal Survey
Large Mission Concepts

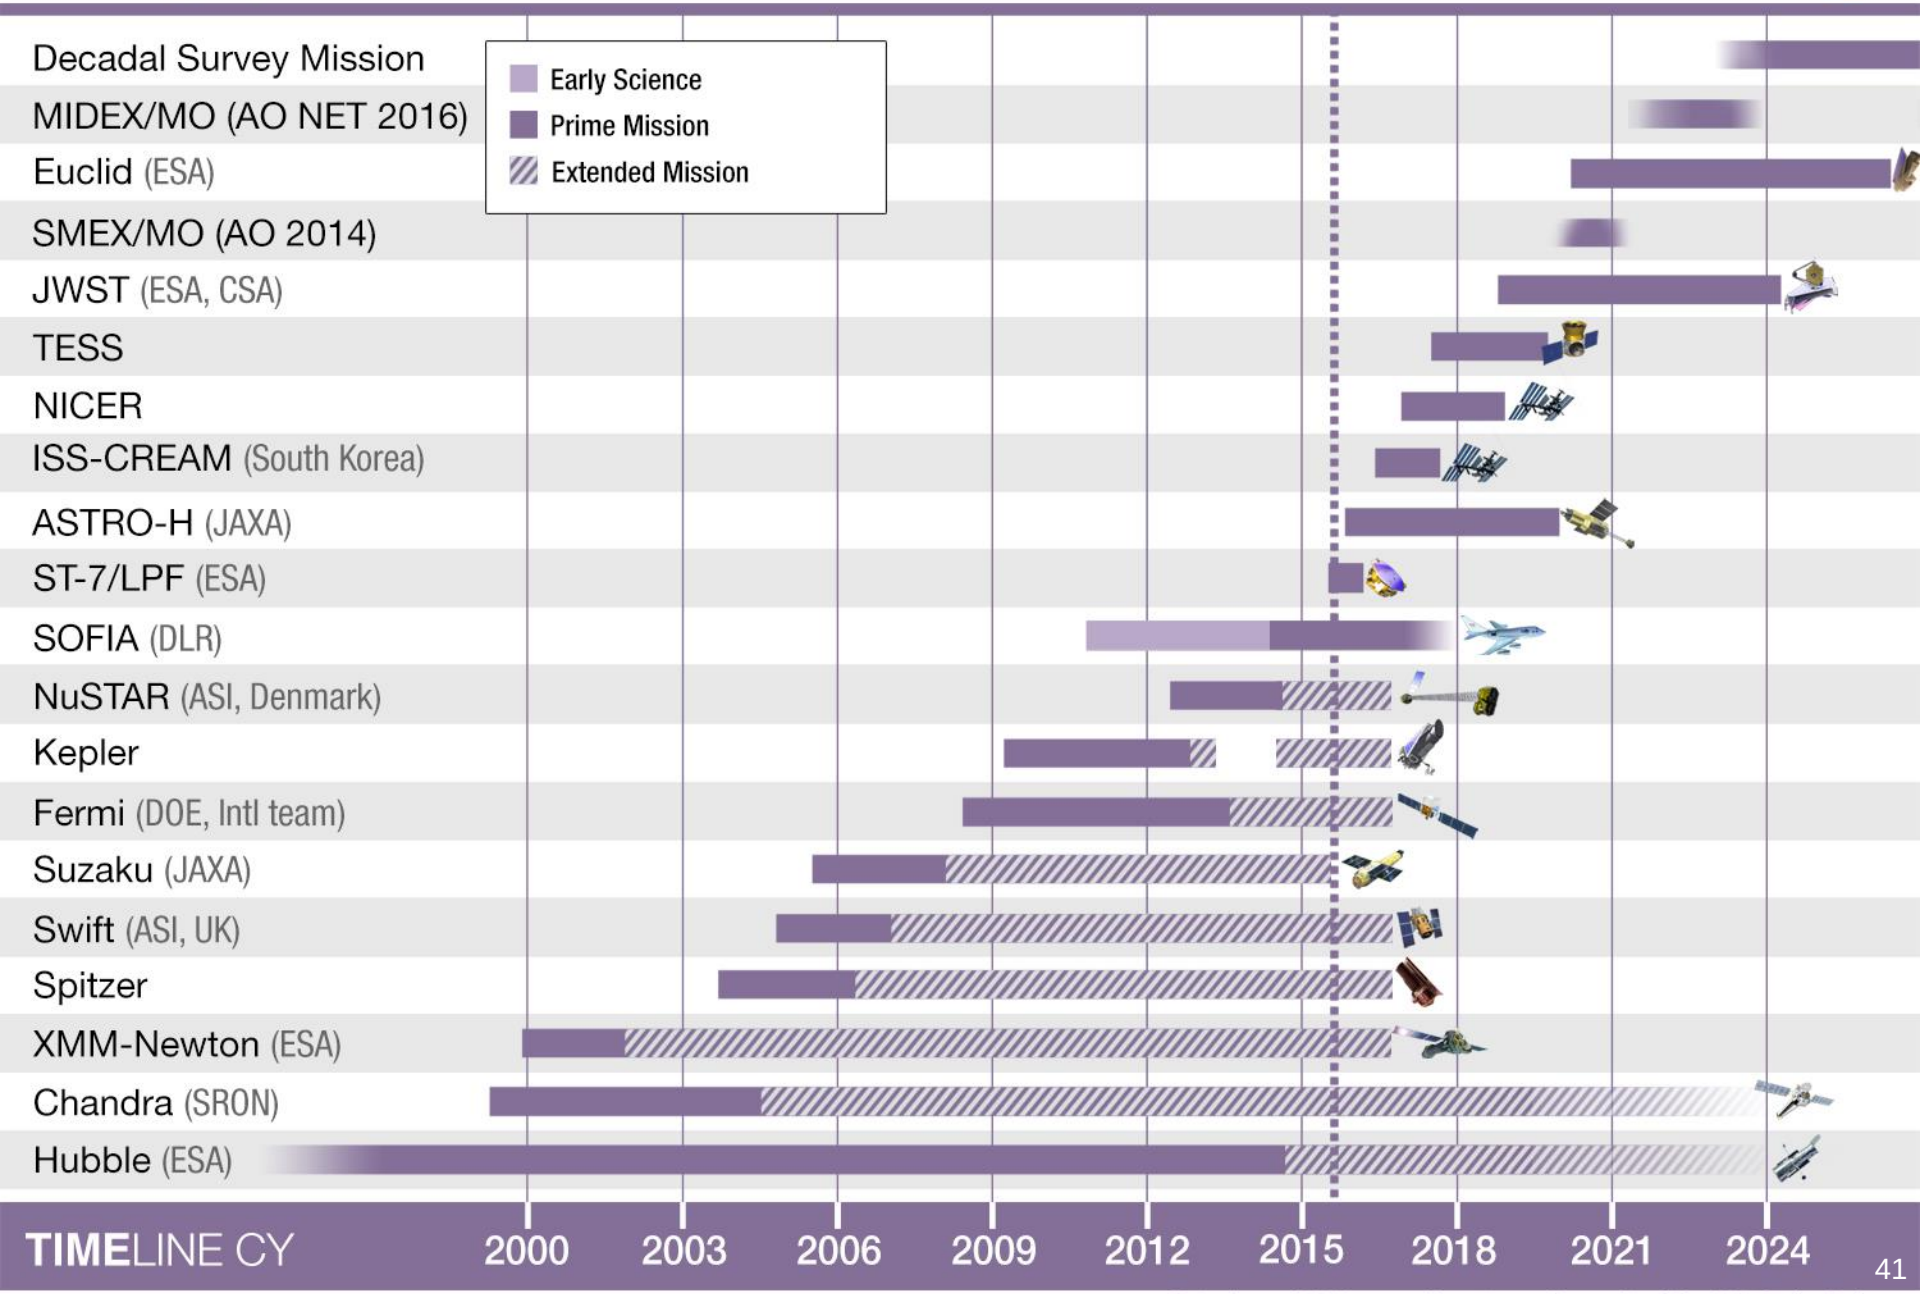
Comments on Science and Technology Definition Teams

- STDTs will be selected by HQ
  - Community call for self nominations, nominally on day after AAS Town Hall at Jan 2016 AAS Meeting in Kissimmee
  - Candidates vetted by NASA HQ and Program Office plus consult with Center Study Office
  - Astrophysics Division Director will appoint STDT Chairs and members
- STDTs will be chartered
  - Charter available at time of STDT call
- STDTs will have significant role and responsibility
  - Develop science case
  - Flow science case into mission requirements
  - Vet technology gap list
  - Make decisions in cost/capability vs science trades

Preparing for the 2020 Decadal Survey
Large Mission Concepts

- NASA Plan for Community Input
  - 2015: PAGs gather community input on selecting concepts for study
  - 2016: Appoint STDT and Center study office, STDT assesses technology
  - 2017: Fund technology development through SAT, STDT develops DRM
  - 2018: STDT submits DRM for cost assessment
  - 2019: STDT issues report and provides input to Decadal Survey

Astrophysics Timeline



Dates beyond 2016 are contingent upon the results of the 2016 Senior Review

Backup

SOFIA
Stratospheric Observatory for Infrared Astronomy

- **World's Largest Airborne Observatory**
- 2.5-meter telescope
- 80/20 Partnership between NASA and the German Aerospace Center (DLR)
- Science Center and Program Management at NASA-Ames Research Center
- Science Flight Operations at NASA-Armstrong Flight Research Center
- Four US and Two German science instruments commissioned
  - Provide imaging, spectroscopy and photometry ranging from visible to far infrared
  - Advanced science instruments under development for future operation

CURRENT STATUS:

- Observatory entered full operations in May 2014
- Program Management transition to NASA-Ames Research Center completed on October 1, 2015
- Observing status:
  - Cycle 3 in progress since February 2015
  - Cycle 4 to begin in February 2016
  - Completed Southern Hemisphere deployment with 4 science instruments
- Second generation instruments:
  - Commissioned upGREAT, multi-pixel heterodyne spectrometer (German instrument)
  - Testing/integrating HAWC+, far infrared imager & polarimeter; 2016 commissioning (U.S. instrument)
- Third-generation instrument to be selected in 2016
- Implemented science community feedback and IG recommendations for improved science productivity
  - Increased support for guest investigators
  - Increased capacity to deploy multiple instruments
  - Streamlined maintenance processes to increase observatory availability
  - Increased support for future science instrumentation
- 722 hours of science data from completed Cycles (Early Science through Cycle 2) has led, so far, to:
  - 52 peer-reviewed science papers
  - On average, one paper per 1.5 flights (so far)
  - Publications in 2 high-impact journals (*Nature* and *Science*)
  - Occultation data (Cycle 3) synergetic with New Horizons

Kepler
Kepler Space Telescope

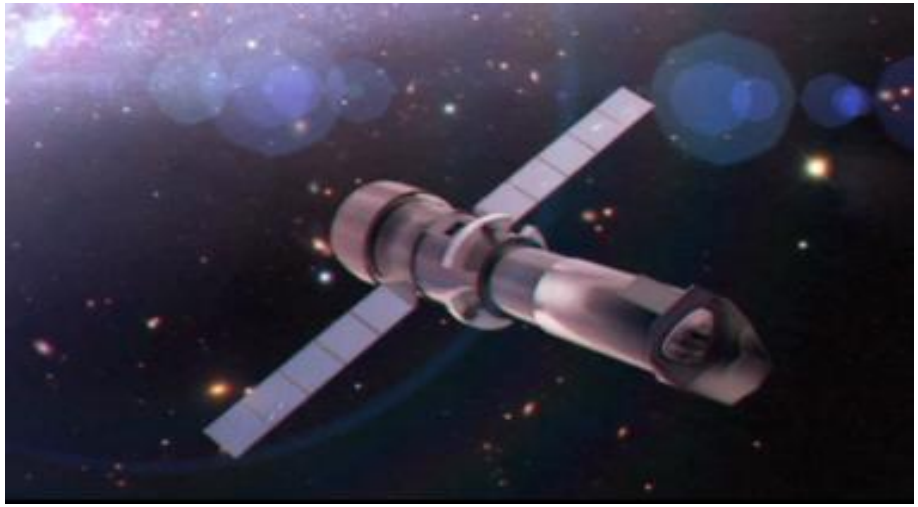
- **NASA's first space mission dedicated to the search for extrasolar planets, or exoplanets**
- **PI:** W. Borucki, NASA Ames Research Center
- **Launch Date:** March 6, 2009
- **Payload:** 0.95-meter diameter telescope designed to measure the tiny dimming that occurs when an orbiting planet passes in front of ('transits') a star
- **Scientific objectives:**
  - conduct census of exoplanet systems
  - explore the structure and diversity of extrasolar planetary systems
  - determine the frequency of habitable, Earth-sized planets in our galaxy

CURRENT STATUS:

- Kepler "K2" observation method was approved for operations through FY2016 after completion of the 2014 Senior Review.
  - Kepler is conducting observations along the ecliptic, changing its orientation four times per year.
  - The seventh 75-day Campaign started October 3.
  - December 18, 2014: First confirmed planet discovery using K2 observation method
- From 2009-13, Kepler continuously monitored 100 sq. deg. field in constellations of Cygnus and Lyra for 4+ years.
  - These observations ended after failure of 2nd reaction wheel.
- Analysis of first 4 years of Kepler data has revealed:
  - Approximately 4696 exoplanet candidates
  - Approximately 1033 candidates confirmed as planets to date
  - Almost 300 exoplanets (confirmed and candidates) discovered in their star's "habitable zone".
- Analysis of the full (4+ year) Kepler data set ongoing.

Athena

Advanced **T**elescope for **H**igh **En**ergy **A**strophysics



- **Second ESA Cosmic Vision Large mission**
  - L-class with NASA/JAXA participation
  - Decadal Survey recommendation
  - Large X-ray mirror, X-IFU and WFI instruments
- **Launch Date:** 2028
- **Breakthrough Technologies**:
  - High Throughput, Wide FOV, High spectral resolution X-ray Astronomy
  - 10x Chandra area, 100x improved non-dispersive spectral resolution, 5x FOV.
- **Science Objectives**: The Hot and Energetic Universe: How does ordinary matter assemble into the large scale structures that we see today? How do black holes grow and shape the Universe?

CURRENT STATUS:

- Selected as 2nd Large mission in ESA Cosmic Visions Program
- Currently in 2 year Study Phase
- NASA and US community involved in Study Phase via membership on ESA-chartered Athena Science Study Team and Science Working Groups
- NASA budgeting for a $100M-$150M hardware contribution, plus a US GO program and a U.S. data center
- NASA will provide the sensor array for the X-ray Integral Field Unit (calorimeter)
- NASA and ESA are discussing other possible NASA contributions, such as:
  - A contribution to the Wide Field Imager
  - Use of the NASA XRCF for Calibration
  - Contribution to science data center (U.S. node)
- NASA continues to invest in Athena technologies via SAT and directed investigations.

FY16 President's Budget Request

Outyears are notional planning from FY16 President's budget request

($M)	2014	2015	2016	2017	2018	2019	2020
Astrophysics*	$678	$685	$689	$707	$750	$986	$1,118
JWST	$658	$645	$620	$569	$535	$305	$198

- Continues preformulation of WFIRST-AFTA as the "Astrophysics Decadal Strategic Mission."
- Grows Astrophysics Research and Analysis (including Astrophysics Data Analysis Program) from ~$80M/yr to ~$90M/yr in FY16.
- Supports completion of missions under development, including LPF/ST7, ASTRO-H, NICER, TESS, and Euclid.
- Enables selection of a SMEX mission and an Explorer Mission of Opportunity from the 2014 AO, and notional release of a MIDEX AO in late CY16/early FY17.
- Provides full funding for SOFIA operations and places SOFIA into the 2016 Astrophysics Senior Review. (Subsequently SOFIA was deferred to the 2018 Senior Review.)
- Plans for the 2016 Astrophysics Senior Review.
- Plans for continued Hubble operations through FY20 providing overlap with JWST.
- Plans for mission concept studies and technology development (within the three Program SR&T budgets) leading up to the 2020 Decadal Survey.

* Excludes "SMD STEM Activities" in all years.
