Important Information And Revision Notes

REVISION FOR FY 2025:

- **Supplementary and Single-Copy Documents:** Page limits have been removed for the Statement of Work. The Statement of Work is now submitted as a Single Copy Document.
- **Implementation Partner Letters of Collaboration are no longer required.**

IMPORTANT NOTES:

The NSF-CASIS Program is not intended to be used for proposals that are appropriate for existing funding mechanisms or that continue well-established practices. **Prospective proposers must submit a Feasibility Review Form to the Center for the Advancement of Science in Space, Inc. (CASIS) by January 15, 2025. The form will be evaluated for operational feasibility and terrestrial benefit.**

Proposers who have submitted Feasibility Review Forms that pass the initial operational and terrestrial benefit review by CASIS will be eligible to submit a full proposal for evaluation by NSF. Documentation from the CASIS team confirming eligibility to submit a proposal after the operation and terrestrial benefit reviews must be provided as a Single Copy Document when the full proposal is submitted.

CASIS strongly encourages submission of the Feasibility Review Form as early as possible. Potential PIs or teams should consult with the CASIS Operations team (NSFCASIS@issnationallab.org) for feedback regarding feasibility and compliance with flight requirements and capabilities.

Final Deadline for Submitting the Feasibility Review Form to CASIS: January 15, 2025

To Submit the Feasibility Review Form, please visit: <https://issnationallab.org/opportunities/rfp2025-3/> .

CASIS officers will respond to a Feasibility Review Form within four weeks after submission.

Submitted proposals that pass the initial operational and terrestrial benefit review will be eligible for evaluation by NSF. CASIS personnel will be permitted to view full NSF proposals, reviews, and attend review panels as observers.

Any proposal submitted in response to this solicitation should be submitted in accordance with the *NSF Proposal & Award Policies & Procedures Guide* (PAPPG) that is in effect for the relevant due date to which the proposal is being submitted. The NSF PAPPG is regularly revised and it is the responsibility of the proposer to ensure that the proposal meets the requirements specified in this solicitation and the applicable version of the PAPPG. Submitting a proposal prior to a specified deadline does not negate this requirement.

Summary Of Program Requirements

General Information

Program Title:

NSF/CASIS Collaboration on Tissue Engineering and Mechanobiology on the International Space Station (ISS) to Benefit Life on Earth

Synopsis of Program:

The Divisions of Chemical, Bioengineering and Environmental Transport (CBET) and Civil, Mechanical, and Manufacturing Infrastructure (CMMI) in the Engineering Directorate of the National Science Foundation (NSF) are partnering with the Center for the Advancement of Science in Space, Inc. (CASIS) to solicit research projects in the fields of tissue engineering and mechanobiology that can utilize the International Space Station (ISS) National Lab to conduct research that will benefit life on Earth. Topics must fit the scope of either the [Biomechanics and Mechanobiology](#) Program or the [Engineering of Biomedical Systems](#) Program and must address fundamental engineering gaps. For utilization of the ISS National Lab through this solicitation, individuals and entities must qualify as a United States citizen or alien admitted for permanent residence in the United States, or as a corporation, partnership, or other organization organized under the laws of the United States, respectively.

Broadening Participation In STEM

NSF recognizes the unique lived experiences of individuals from communities that are underrepresented and/or under-served in science, technology, engineering, and mathematics (STEM) and the barriers to inclusion and access to STEM education and careers. NSF highly encourages the leadership, partnership, and contributions in all NSF opportunities of individuals who are members of such communities supported by NSF. This includes leading and designing STEM research and education proposals for funding; serving as peer reviewers, advisory committee members, and/or committee of visitor members; and serving as NSF leadership, program, and/or administrative staff. NSF also highly encourages demographically diverse institutions of higher education (IHEs) to lead, partner, and contribute to NSF opportunities on behalf of their research and education communities. NSF expects that all individuals, including those who are members of groups that are underrepresented and/or under-served in STEM, are treated equitably and inclusively in the Foundation's proposal and award process.

NSF encourages IHEs that enroll, educate, graduate, and employ individuals who are members of groups underrepresented and/or under-served in STEM education programs and careers to lead, partner, and contribute to NSF opportunities, including leading and designing STEM research and education proposals for funding. Such IHEs include, but may not be limited to, community colleges and two-year institutions, mission-based institutions such as Historically Black Colleges and Universities (HBCUs), Tribal Colleges and Universities (TCUs), women's colleges, and institutions that primarily serve persons with disabilities, as well as institutions defined by enrollment such as Predominantly Undergraduate Institutions (PUIs), Minority-Serving Institutions (MSIs), and Hispanic Serving Institutions (HSIs).

"Broadening participation in STEM" is the comprehensive phrase used by NSF to refer to the Foundation's goal of increasing the representation and diversity of individuals, organizations, and geographic regions that contribute to STEM teaching, research, and innovation. To broaden participation in STEM, it is necessary to address issues of equity, inclusion, and access in STEM education, training, and careers. Whereas all NSF programs might support broadening participation

components, some programs primarily focus on supporting broadening participation research and projects. Examples can be found on the NSF [Broadening Participation in STEM](#) website.

Cognizant Program Officer(s):

Please note that the following information is current at the time of publishing. See program website for any updates to the points of contact.

- Rizia Bardhan, telephone: (703) 292-2390, email: rbardhan@nsf.gov
- Gretchen J. Mahler, telephone: (703) 292-7354, email: gmahler@nsf.gov
- Shivani Sharma, telephone: (703) 292-4204, email: shisharm@nsf.gov
- Steven M. Zehnder, telephone: (703) 292-7014, email: szehnder@nsf.gov
- Kristin Kopperud, telephone: (859) 806-9838, email: kkopperud@issnationallab.org

Applicable Catalog of Federal Domestic Assistance (CFDA) Number(s):

- 43.007 --- Center for the Advancement of Science in Space
- 47.041 --- Engineering

Award Information

Anticipated Type of Award: Standard Grant

Estimated Number of Awards: 2 to 4

Anticipated Funding Amount: \$800,000 to \$1,600,000

NSF Funding (total) available under this solicitation is up to \$1.6 million to be distributed in FY 2025. Budget requests may be for up to \$400,000 total, direct and indirect costs, and up to three years in duration. The award size and duration should be consistent with the project scope. Collaborative projects from multiple organizations are accepted, according to standard NSF procedures. The total budget for a collaborative project from multiple organizations must not exceed \$400,000.

Estimated program budget, number of awards and average award size/duration are subject to the availability of funds.

Funding for ISS Experiments:

NSF awards under this solicitation will provide PIs with support to conduct fundamental and translational research to prepare experiments for execution on-board the ISS, to collaborate with service providers as necessary, to provide preliminary analysis to conduct the experiment, to analyze and interpret data, and to disseminate results broadly. CASIS will assist recipients in translating ground-based experiments and technologies into space-appropriate hardware where possible. Costs associated with the translation of the proposed experiments to flight experiments on-board the ISS, including the training of ISS crews, transporting the experiment payload and equipment to the ISS, and conducting experiments on the ISS, will be supported by CASIS through their cooperative agreement with NASA.

CASIS may provide funding to Commercial Implementation Partners for PIs to utilize existing flight hardware and facilities to support proposed research but note that proposals requiring significant modifications to hardware or the development of new capabilities will be out of scope for this solicitation. For information on available flight hardware for this solicitation, please contact representatives from the different Implementation Partners offering services and hardware through this proposal <https://issnationallab.org/opportunities/rfp2025-3/> . Please contact the CASIS operations team (NSFCASIS@issnationallab.org) if you have any questions or concerns.

Both organizations will jointly manage the project reviews. All NSF awards will be made via a Standard Grant mechanism. In addition, NSF recipients shall be required to negotiate separate conditions with CASIS for ISS utilization support. CASIS'

Agreements contain non-negotiable provisions which are mandatory and cannot be altered. If an award recipient does not desire to or cannot comply with such mandatory flow down provisions, it should not accept the award opportunity.

Eligibility Information

Who May Submit Proposals:

Proposals may only be submitted by the following:

- Institutions of Higher Education (IHEs): Two- and four-year IHEs (including community colleges) accredited in, and having a campus located in the US, acting on behalf of their faculty members. Special Instructions for International Branch Campuses of US IHEs: If the proposal includes funding to be provided to an international branch campus of a U.S. institution of higher education (including through use of sub-awards and consultant arrangements), the proposer must explain the benefit(s) to the project of performance at the international branch campus, and justify why the project activities cannot be performed at the US campus.
- Non-profit, non-academic organizations: Independent museums, observatories, research laboratories, professional societies and similar organizations located in the U.S. that are directly associated with educational or research activities.
- For-profit organizations: U.S.-based commercial organizations, including small businesses, with strong capabilities in scientific or engineering research or education and a passion for innovation.

Who May Serve as PI:

The PI and any co-PIs must qualify as a United States citizen or alien admitted for permanent residence in the United States, and any corporation, partnership, or other organization organized under the laws of the United States.

Limit on Number of Proposals per Organization:

There are no restrictions or limits.

Limit on Number of Proposals per PI or co-PI: 1

An investigator may only be a PI, co-PI, or other Senior/Key Personnel on one proposal submitted under this solicitation in a given fiscal year. The submitting organization is responsible for ensuring that the PI and all co-PI(s) and other Senior/Key Personnel are participating in only one proposal. If an individual exceeds this limit, the first proposal submitted to include this individual will be accepted and the remainder will be returned without review. No exceptions will be made.

Recipients on active NSF-CASIS Tissue Engineering/Mechanobiology grants may not serve as a PI, co-PI, or other Senior/Key Personnel on a subsequent NSF-CASIS Tissue Engineering/Mechanobiology proposal until the active award is closed.

Implementation Partners - commercial companies that work with the ISS National Lab to provide services related to payload development, including the translation of ground-based science to a space-based platform - are exempt from the above limits on the number of proposals per PI or co-PI. Implementation partners may not act as the lead organizations on NSF/CASIS proposals.

Proposal Preparation and Submission Instructions

A. Proposal Preparation Instructions

- **Letters of Intent:** Not required
- **Preliminary Proposal Submission:** Not required

- **Full Proposals:**

- Full Proposals submitted via Research.gov: *NSF Proposal and Award Policies and Procedures Guide* PAPPG) guidelines apply. The complete text of the PAPPG is available electronically on the NSF website at: https://www.nsf.gov/publications/pub_summ.jsp?ods_key=pappg.
- Full Proposals submitted via Grants.gov: *NSF Grants.gov Application Guide: A Guide for the Preparation and Submission of NSF Applications via Grants.gov* guidelines apply (Note: The *NSF Grants.gov Application Guide* is available on the Grants.gov website and on the NSF website at: https://www.nsf.gov/publications/pub_summ.jsp?ods_key=grantsgovguide).

B. Budgetary Information

- **Cost Sharing Requirements:**

Inclusion of voluntary committed cost sharing is prohibited.

- **Indirect Cost (F&A) Limitations:**

Not Applicable

- **Other Budgetary Limitations:**

Not Applicable

C. Due Dates

- **Full Proposal Deadline(s)** (due by 5 p.m. submitting organization's local time):

March 18, 2025

Proposal Review Information Criteria

Merit Review Criteria:

National Science Board approved criteria. Additional merit review criteria apply. Please see the full text of this solicitation for further information.

Award Administration Information

Award Conditions:

Additional award conditions apply. Please see the full text of this solicitation for further information.

Reporting Requirements:

Standard NSF reporting requirements apply.

I. Introduction

The Center for the Advancement of Science in Space, Inc. (CASIS) is an Internal Revenue Code Section 501(c)(3) entity responsible for management of the International Space Station (ISS) National Laboratory under a Cooperative Agreement with NASA (80JSC018M0005). Per Section 504 of the NASA Authorization Act of 2010, the purpose of CASIS is to maximize the value of the investment the U.S. government made in the ISS National Lab and demonstrate the scientific and technological productivity of the ISS National Lab over the next decade. CASIS seeks to advance scientific research, technology development, and education in conjunction with utilization of the ISS, managing a diverse research, technology, and education portfolio across a broad range of scientific fields.

Because NSF and CASIS have a common interest in research and development in transformative biomedical engineering projects that utilize microgravity conditions, NSF and CASIS have developed a collaboration to jointly support research that can take advantage of the opportunities afforded by conducting experiments in the ISS.

The purpose of this solicitation is to attract proposals that make use of the ISS National Lab for flight research projects in the field of biomedical engineering. Responsive proposals will describe how they will utilize the ISS National Lab to develop novel ideas into discovery-level and transformative projects that integrate engineering and life sciences. CASIS manages the ISS National Lab in collaboration with NASA as a public service to advance science research and technology development, expand human knowledge, inspire and educate the next generation, foster the commercial development of space, and demonstrate scientific capabilities in space for the benefit of life on Earth. Research at the interface of engineering and biomedical sciences in microgravity that advances both disciplines for terrestrial benefit is solicited. The projects should focus on high impact transformative methods and technologies. Projects should include methods, models and enabling tools of understanding and controlling living systems; fundamental improvements in deriving information from cells, tissues, organs, and organ systems; or new approaches to the design of systems that include both living and non-living components. The long-term impact of the projects can be related to fundamental understanding of cell and tissue function in normal and pathological conditions, effective disease diagnosis and/or treatment, or improved health care delivery.

Of particular interest to the NSF Engineering of Biomedical Systems (EBMS) program is fundamental and transformative research in the following areas of biomedical engineering:

- Development of validated models (living or computational) of healthy and pathological tissues and organ systems that could support improved fundamental understanding and control of these systems;
- New approaches to the design and validation of systems that integrate living and non-living components for improved understanding of physiology that could be applied in the future for diagnosis, monitoring, and treatment of disease or injury; and
- Advanced biomanufacturing of three-dimensional tissues and organs.

Of particular interest to the NSF Biomechanics and Mechanobiology (BMMB) program is fundamental research in biomechanics and mechanobiology, including:

- Multi-scale mechanics approaches that integrate across molecular, cell, tissue, and organ domains; and
- The influence of in vivo mechanical forces on cell and matrix biology in histomorphogenesis, maintenance, regeneration, repair, and aging of tissues and organs.

Innovative proposals outside of these specific interest areas may be considered. However, prior to submission, it is strongly recommended that the PI contact the Program Directors to avoid the possibility of the proposal being returned without review.

The collaboration seeks to exploit the complementary missions of (i) research and development for NSF, and (ii) stimulation, development and management of U.S. national uses of the ISS National Lab by U.S. government agencies, academic institutions, and private firms for CASIS. Proposals must seek to exploit the ISS National Lab for biomedical engineering applications that will ultimately benefit life on Earth. The proposal must include a description of project benefits for life on Earth. Proposals focused on research and technology development supporting only space exploration-related goals do not fall within the scope of the NSF and CASIS mission and will be considered non-responsive to this solicitation.

II. Program Description

The unique high quality and long duration microgravity environment on the ISS National Lab provides an extraordinary research platform for experiments in the biological and medical sciences. Microgravity induces a vast array of changes in individual cells and model organisms ranging from viruses and microorganisms to humans, including global alterations in gene expression and 3-dimensional aggregation of cells into biofilms or tissue-like architectures that recapitulate the

structure and function of organs. Moreover, studies reveal a variety of space flight-induced health conditions, many of which may serve as accelerated models of ground-based ailments such as aging and trauma. Research into these and other effects of the space environment may advance our fundamental understanding of cell and tissue function, effective disease diagnosis and /or treatment, or improved health care delivery.

The following constitutes a partial list of the distinct and unique advantages for conducting research in space at the interface of engineering and biomedical sciences:

A. Effects of microgravity:

- Altered gene expression results in phenotypic consequence, including changes in cellular immune function and microbial growth and virulence;
- Cell cultures show altered processes of cell growth, cell differentiation and cell communication, including increased pluripotency of stem cells;
- Scaffold-free tissue cultures grown in three dimensions have advanced the field of tissue engineering by facilitating diffusion of nutrients and oxygen into spheroids and enhancing the aggregation of cells by induction of differential cellular signaling pathways, achieving constructs larger than those engineered in conventional bioreactors or 2D cultures;
- Changes in body systems result in bone loss, immune dysfunction, vision changes, viral reactivation and loss of skeletal muscle mass and strength, among other systemic effects; and
- Advances in additive manufacturing and tissue engineering capabilities on orbit using biological and biocompatible materials to facilitate cellular self-organization and 3D tissue formation.

B. Radiation environment:

- Includes high energy protons and atomic nuclei of heavier elements.

To receive funding as an NSF-ISS-appropriate project, a flight experiment that utilizes the ISS National Lab should be proposed. If flight schedules change, investigators may modify proposed timelines, subject to review and approval by the CASIS Operations team.

This solicitation is not intended to be used for projects that can be accommodated within other NSF funding mechanisms. In addition, this solicitation is not intended to be used for projects that can be conducted in their entirety with ground-based research.

Collaborative proposals can also be submitted and collaborations with industry and relevant costs for their participation are allowed. In these cases, if the co-PIs are at different organizations and have complementary skills and facilities, then the use of the separately submitted collaborative proposal mechanism is allowed. See PAPPG Chapter II.E.3 for information about submission of a collaborative proposal from multiple organizations.

Prospective proposals will be subject to a review for operational feasibility and terrestrial benefit, both conducted by CASIS. See the CASIS guidelines for further details on these reviews at <https://issnationallab.org/opportunities/rfp2025-3/> .

The solicitation seeks to increase use of the ISS National Lab for flight research projects in the field of biomedical engineering. Costs such as preparatory work, including but not limited to design of experimental prototypes and numerical simulations, data acquisition, and post-flight data analysis, can be included in the NSF budget. Ideal proposals will describe a commercial, civil, or academic project to achieve research or technology development objectives that will directly impact fundamental studies on cellular engineering, tissue engineering, and models of physiological systems, including (but not limited to):

- Scaffolds/matrices
- Cell-cell, cell-matrix interactions
- Cellular immunotherapies

- Tissue biomanufacturing
- Hybrid systems for modeling of physiological or pathophysiological processes
- Computational models of physiological or pathophysiological systems that are validated based on experiments conducted on the ISS
- Mechanobiology related to phenotype expression

Prospective proposers should read the payload synopses and technical data on the CASIS website at <https://issnationallab.org/opportunities/rfp2025-3/>  to understand the basic capabilities of the offered payload facilities and instrumentation. NSF will support research proposals that develop fundamental and translational research and CASIS will assist recipients in translating ground-based experiments and technologies into the space-appropriate hardware offered in this solicitation where possible. An ideal proposal will demonstrate investigator's knowledge of the significant challenges and importance of the proposed research and how ISS utilization will allow their research goals to be achieved. All proposers should read this online material to clearly understand the hardware platform and capabilities on the ISS.

CASIS also encourages prospective proposers to learn about the availability and capability of flight hardware and integration services by directly communicating with the Implementation Partner and the CASIS Operations team (NSFCASIS@issnationallab.org).

Proposals that do not follow the CASIS guidelines will be deemed non-responsive to this solicitation and subject to return without review (RWR). Projects whose central focus is on leveraging established microphysiological systems or animal models to test efficacy of therapeutics are not responsive and will be RWR.

III. Award Information

NSF Funding (total) available under this solicitation is up to \$1.6 million to be distributed in FY 2025. Budget requests may be for up to \$400,000 total, direct and indirect costs, and up to three years in duration. The award size and duration should be consistent with the project scope. Collaborative projects from multiple organizations are accepted, according to standard NSF procedures. The total budget for a collaborative project from multiple organizations must not exceed \$400,000.

Estimated program budget, number of awards and average award size/duration are subject to the availability of funds.

Funding for ISS Experiments:

NSF awards under this solicitation will provide PIs with support to conduct fundamental and translational research to prepare experiments for execution on-board the ISS, to collaborate with service providers as necessary, to provide preliminary analysis to conduct the experiment, to analyze and interpret data, and to disseminate results broadly. CASIS will assist recipients in translating ground-based experiments and technologies into space-appropriate hardware where possible. Implementation Partner costs associated with the translation of the proposed experiments to flight experiments on-board the ISS, including the training of ISS crews, transporting the experiment payload and equipment to the ISS, and conducting experiments on the ISS, will be supported by CASIS through their cooperative agreement with NASA. The Implementation Partner's budget will be provided in their statement of work (SOW) and does not need to be included in the Principal Investigator's budget section.

CASIS may provide funding to Commercial Implementation Partners for PIs to utilize existing flight hardware and facilities to support proposed research but note that proposals requiring significant modifications to hardware or the development of new capabilities will be out of scope for this solicitation. For information on available flight hardware for this solicitation, please contact representatives from the different Implementation Partners offering services and hardware through this proposal <https://issnationallab.org/opportunities/rfp2025-3/> . Please contact the CASIS operations team (NSFCASIS@issnationallab.org) if you have any questions or concerns.

Both organizations will jointly manage the project reviews. All NSF awards will be made via a Standard Grant mechanism. In addition, NSF recipients shall be required to negotiate separate conditions with CASIS for ISS utilization support. CASIS'

Agreements contain non-negotiable provisions which are mandatory and cannot be altered. If an award recipient does not desire to or cannot comply with such mandatory flow down provisions, it should not accept the award opportunity.

IV. Eligibility Information

Who May Submit Proposals:

Proposals may only be submitted by the following:

- Institutions of Higher Education (IHEs): Two- and four-year IHEs (including community colleges) accredited in, and having a campus located in the U.S., acting on behalf of their faculty members. Special Instructions for International Branch Campuses of US IHEs: If the proposal includes funding to be provided to an international branch campus of a US institution of higher education (including through use of sub-awards and consultant arrangements), the proposer must explain the benefit(s) to the project of performance at the international branch campus, and justify why the project activities cannot be performed at the US campus.
- Non-profit, non-academic organizations: Independent museums, observatories, research laboratories, professional societies and similar organizations located in the U.S. that are directly associated with educational or research activities.
- For-profit organizations: U.S.-based commercial organizations, including small businesses, with strong capabilities in scientific or engineering research or education and a passion for innovation.

Who May Serve as PI:

The PI and any co-PIs must qualify as a United States citizen or alien admitted for permanent residence in the United States, and any corporation, partnership, or other organization organized under the laws of the United States.

Limit on Number of Proposals per Organization:

There are no restrictions or limits.

Limit on Number of Proposals per PI or co-PI: 1

An investigator may only be a PI, co-PI, or other Senior/Key Personnel on one proposal submitted under this solicitation in a given fiscal year. The submitting organization is responsible for ensuring that the PI and all co-PI(s) and other Senior/Key Personnel are participating in only one proposal. If an individual exceeds this limit, the first proposal submitted to include this individual will be accepted and the remainder will be returned without review. No exceptions will be made.

Recipients on active NSF-CASIS Tissue Engineering/Mechanobiology grants may not serve as a PI, co-PI, or other Senior/Key Personnel on a subsequent NSF-CASIS Tissue Engineering/Mechanobiology proposal until the active award is closed.

Implementation Partners - commercial companies that work with the ISS National Lab to provide services related to payload development, including the translation of ground-based science to a space-based platform - are exempt from the above limits on the number of proposals per PI or co-PI. Implementation partners may not act as the lead organizations on NSF/CASIS proposals.

Additional Eligibility Info:

Grant Opportunities for Academic Liaison with Industry (GOALI) proposals, where academe and industry partner on a research project, are encouraged (see PAPPG Chapter II.F.5 for additional information).

V. Proposal Preparation And Submission Instructions

A. Proposal Preparation Instructions

Full Proposal Preparation Instructions: Proposers may opt to submit proposals in response to this Program Solicitation via Research.gov or Grants.gov.

- Full Proposals submitted via Research.gov: Proposals submitted in response to this program solicitation should be prepared and submitted in accordance with the general guidelines contained in the *NSF Proposal and Award Policies and Procedures Guide (PAPPG)*. The complete text of the PAPPG is available electronically on the NSF website at: https://www.nsf.gov/publications/pub_summ.jsp?ods_key=pappg. Paper copies of the PAPPG may be obtained from the NSF Publications Clearinghouse, telephone (703) 292-8134 or by e-mail from nsfpubs@nsf.gov. The Prepare New Proposal setup will prompt you for the program solicitation number.
- Full proposals submitted via Grants.gov: Proposals submitted in response to this program solicitation via Grants.gov should be prepared and submitted in accordance with the *NSF Grants.gov Application Guide: A Guide for the Preparation and Submission of NSF Applications via Grants.gov*. The complete text of the *NSF Grants.gov Application Guide* is available on the Grants.gov website and on the NSF website at: https://www.nsf.gov/publications/pub_summ.jsp?ods_key=grantsgovguide). To obtain copies of the Application Guide and Application Forms Package, click on the Apply tab on the Grants.gov site, then click on the Apply Step 1: Download a Grant Application Package and Application Instructions link and enter the funding opportunity number, (the program solicitation number without the NSF prefix) and press the Download Package button. Paper copies of the Grants.gov Application Guide also may be obtained from the NSF Publications Clearinghouse, telephone (703) 292-8134 or by e-mail from nsfpubs@nsf.gov.

In determining which method to utilize in the electronic preparation and submission of the proposal, please note the following:

Collaborative Proposals. All collaborative proposals submitted as separate submissions from multiple organizations must be submitted via Research.gov. PAPPG Chapter II.E.3 provides additional information on collaborative proposals.

See PAPPG Chapter II.D.2 for guidance on the required sections of a full research proposal submitted to NSF. Please note that the proposal preparation instructions provided in this program solicitation may deviate from the PAPPG instructions.

The following instructions supplement the guidance in the PAPPG and NSF Grants.gov Application Guide:

Feasibility Review: All investigators who wish to submit a proposal in response to this solicitation must submit a completed CASIS Feasibility Review Form. The CASIS Feasibility Review Form will be available on the CASIS website: <https://issnationallab.org/opportunities/rfp2025-3/> .

This CASIS Feasibility Review Form must be completed and submitted via the CASIS website no later than January 15, 2025, to allow time for a response and time to prepare the full proposal.

CASIS officers will respond to a Feasibility Review Form within four weeks after submission.

Documentation from the CASIS team confirming eligibility to submit a proposal after the operational feasibility review must be provided as a Single Copy Document. A proposal submitted without the required authorizations will be returned without review.

- A proposal that passes the operational review represents CASIS's preliminary judgment that the project might be appropriate for consideration under this initiative; it is not a commitment to recommend support of a proposal with program funds. Documentation from the CASIS team confirming eligibility to submit a proposal after the operational reviews must be provided as a Single Copy Document. A proposal submitted without the required authorizations will be returned without review. For a description about the CASIS operational review criteria, please see <https://issnationallab.org/opportunities/rfp2025-3/> .
- The proposal must explicitly address how the project will utilize the ISS capabilities and how the research will benefit life on Earth.

NSF recipients under this solicitation will need to execute an agreement with CASIS in order to utilize the ISS National Laboratory. Template agreements (<https://issnationallab.org/opportunities/rfp2025-3/> ) have been developed for this program to streamline the processes of forging partnerships between CASIS and recipients. As stated above, CASIS' agreements contain mandatory flow-down provisions which are non-negotiable and cannot be altered. If an award recipient does not desire to or cannot comply with such provisions, it should not accept the award opportunity.

Proposal Title: The project title on the proposal Cover Sheet will be preceded by the prefix "**ISS:**" to distinguish the submission from a regular proposal that would go through a regular review process. If you submit a proposal as part of a set of collaborative proposals, the title of the proposals should begin with "**Collaborative Research: ISS:**" followed by your title. Please note that if submitting via Research.gov, the system will automatically insert the prepended title "Collaborative Research" when the collaborative set of proposals is created.

Project Description: In addition to the requirements specified in the PAPPG, the Project Description must include a separate section with the heading **Benefit to Life on Earth**. This section should clearly describe the motivations for the project and explain the benefit of the potential outcomes of the project for life on Earth. Project Descriptions should also:

- Clearly explain the necessity of the ISS to carry out the proposed project.
- Detail how experiments will be conducted on the ISS and what, if any, ground experimental controls will be utilized.
- Include a timeline where milestones are clearly identified for the duration of the project.
- Specify existing or proposed flight hardware (including any necessary modification) to be used in the project. If a modification to existing hardware is proposed, proposals should describe design requirements, critical components, ground testing, timelines, and projected costs.

Supplementary Documents: Supplementary documents are limited to the specific types of documentation listed in the PAPPG, with the following exceptions. The documents listed below must be included in all proposals submitted to this call. For collaborative projects from multiple organizations, these documents must be included in the lead proposal submission only.

- **List of Project Personnel and Partner Organizations.** Provide current, accurate information for all personnel and institutions involved in the project, including implementation partners. NSF staff will use this information in the merit review process to manage reviewer selection. The list should include all PIs, co-PIs, Senior/Key Personnel, Collaborators, funded/unfunded Consultants, Included Researchers from Sub-awardee Organizations, Postdocs, and project-level advisory committee members for the entire project. This list should be numbered and include (in this order) Full Name, Organizations(s), and Role in the project, with each item separated by a semicolon. Each person listed should start a new numbered line. For example:
 - First Name Last Name; Organization Name; Role
 - First Name Last Name; Organization Name; Role
 - First Name Last Name; Organization Name; Role

Single Copy Documents:

- **Implementation Partner Statement of Work.** A statement of work (SOW) from the Implementation Partner is required to be included as a Single Copy Document with the final proposal. The SOW is reviewed by CASIS personnel to evaluate the operational feasibility of the proposed work on the ISS. An acceptable SOW will contain the following key elements: a summary of how the Implementation Partner's offerings align with the project goals, a detailed scope of end-to-end mission management (concept of operations, hardware availability, verification testing, and hazard identification/safety review approach), a project schedule, and a detailed budget for Implementation Partner costs, including any driving assumptions and detailed costs for modification of hardware. The concept of operations should include an estimate of mass/volume, stowage requirements, power requirements, and crew time with a basis for the estimate.
- Documentation from the CASIS team confirming eligibility to submit a proposal after the operational review.

Additional Instructions for Submission of a GOALI Proposal

When preparing a GOALI proposal, select this program solicitation number and then select "GOALI" as the Type of Proposal. The project title on the proposal Cover Sheet should begin with "**GOALI: ISS**". The proposal must be prepared in accordance with the GOALI specific instructions in Chapter II.F.5 of the PAPPG and the additional instructions contained in this solicitation. Please note that if submitting via Research.gov, the system will automatically insert the prepended title "GOALI" when the proposal is created.

B. Budgetary Information

Cost Sharing:

Inclusion of voluntary committed cost sharing is prohibited.

C. Due Dates

- **Full Proposal Deadline(s)** (due by 5 p.m. submitting organization's local time):

March 18, 2025

Prospective proposers must submit a **Feasibility Review Form** to the Center for the Advancement of Science in Space, Inc. (CASIS) by **January 15, 2025**. The form will be evaluated for operational feasibility and terrestrial benefit. Proposers who have submitted Feasibility Review Forms that pass the initial operational and terrestrial benefit review by CASIS will be eligible to submit a full proposal for evaluation by NSF.

D. Research.gov/Grants.gov Requirements

For Proposals Submitted Via Research.gov:

To prepare and submit a proposal via Research.gov, see detailed technical instructions available at:

https://www.research.gov/research-portal/appmanager/base/desktop?_nfpb=true&_pageLabel=research_node_display&_nodePath=/researchGov/Service/Desktop/ProposalPreparation

For Research.gov user support, call the Research.gov Help Desk at 1-800-381-1532 or e-mail rgov@nsf.gov.

The Research.gov Help Desk answers general technical questions related to the use of the Research.gov system. Specific questions related to this program solicitation should be referred to the NSF program staff contact(s) listed in Section VIII of this funding opportunity.

For Proposals Submitted Via Grants.gov:

Before using Grants.gov for the first time, each organization must register to create an institutional profile. Once registered, the applicant's organization can then apply for any federal grant on the Grants.gov website. Comprehensive information about using Grants.gov is available on the Grants.gov Applicant Resources web page: <https://www.grants.gov/applicants>. In addition, the NSF Grants.gov Application Guide (see link in Section V.A) provides instructions regarding the technical preparation of proposals via Grants.gov. For Grants.gov user support, contact the Grants.gov Contact Center at 1-800-518-4726 or by email: support@grants.gov. The Grants.gov Contact Center answers general technical questions related to the use of Grants.gov. Specific questions related to this program solicitation should be referred to the NSF program staff contact(s) listed in Section VIII of this solicitation.

Submitting the Proposal: Once all documents have been completed, the Authorized Organizational Representative (AOR) must submit the application to Grants.gov and verify the desired funding opportunity and agency to which the application is submitted. The AOR must then sign and submit the application to Grants.gov. The completed application will be transferred to Research.gov for further processing.

The NSF [Grants.gov Proposal Processing in Research.gov informational page](#) provides submission guidance to applicants and links to helpful resources including the NSF [Grants.gov Application Guide](#), [Grants.gov Proposal Processing in Research.gov how-to guide](#), and [Grants.gov Submitted Proposals Frequently Asked Questions](#). Grants.gov proposals must pass all NSF pre-check and post-check validations in order to be accepted by Research.gov at NSF.

When submitting via Grants.gov, NSF strongly recommends applicants initiate proposal submission at least five business days in advance of a deadline to allow adequate time to address NSF compliance errors and resubmissions by 5:00 p.m. submitting organization's local time on the deadline. Please note that some errors cannot be corrected in Grants.gov. Once a proposal passes pre-checks but fails any post-check, an applicant can only correct and submit the in-progress proposal in Research.gov.

Proposers that submitted via Research.gov may use Research.gov to verify the status of their submission to NSF. For proposers that submitted via Grants.gov, until an application has been received and validated by NSF, the Authorized Organizational Representative may check the status of an application on Grants.gov. After proposers have received an e-mail notification from NSF, Research.gov should be used to check the status of an application.

VI. NSF Proposal Processing And Review Procedures

Proposals received by NSF are assigned to the appropriate NSF program for acknowledgment and, if they meet NSF requirements, for review. All proposals are carefully reviewed by a scientist, engineer, or educator serving as an NSF Program Officer, and usually by three to ten other persons outside NSF either as *ad hoc* reviewers, panelists, or both, who are experts in the particular fields represented by the proposal. These reviewers are selected by Program Officers charged with oversight of the review process. Proposers are invited to suggest names of persons they believe are especially well qualified to review the proposal and/or persons they would prefer not review the proposal. These suggestions may serve as one source in the reviewer selection process at the Program Officer's discretion. Submission of such names, however, is optional. Care is taken to ensure that reviewers have no conflicts of interest with the proposal. In addition, Program Officers may obtain comments from site visits before recommending final action on proposals. Senior NSF staff further review recommendations for awards. A flowchart that depicts the entire NSF proposal and award process (and associated timeline) is included in PAPPG Exhibit III-1.

A comprehensive description of the Foundation's merit review process is available on the NSF website at: https://www.nsf.gov/bfa/dias/policy/merit_review/.

Proposers should also be aware of core strategies that are essential to the fulfillment of NSF's mission, as articulated in [Leading the World in Discovery and Innovation, STEM Talent Development and the Delivery of Benefits from Research - NSF Strategic Plan for Fiscal Years \(FY\) 2022 - 2026](#). These strategies are integrated in the program planning and implementation process, of which proposal review is one part. NSF's mission is particularly well-implemented through the integration of research and education and broadening participation in NSF programs, projects, and activities.

One of the strategic objectives in support of NSF's mission is to foster integration of research and education through the programs, projects, and activities it supports at academic and research institutions. These institutions must recruit, train, and prepare a diverse STEM workforce to advance the frontiers of science and participate in the U.S. technology-based economy. NSF's contribution to the national innovation ecosystem is to provide cutting-edge research under the guidance of the Nation's most creative scientists and engineers. NSF also supports development of a strong science, technology, engineering, and mathematics (STEM) workforce by investing in building the knowledge that informs improvements in STEM teaching and learning.

NSF's mission calls for the broadening of opportunities and expanding participation of groups, institutions, and geographic regions that are underrepresented in STEM disciplines, which is essential to the health and vitality of science and engineering. NSF is committed to this principle of diversity and deems it central to the programs, projects, and activities it considers and supports.

A. Merit Review Principles and Criteria

The National Science Foundation strives to invest in a robust and diverse portfolio of projects that creates new knowledge and enables breakthroughs in understanding across all areas of science and engineering research and education. To identify which projects to support, NSF relies on a merit review process that incorporates consideration of both the technical aspects of a proposed project and its potential to contribute more broadly to advancing NSF's mission "to promote the progress of science; to advance the national health, prosperity, and welfare; to secure the national defense; and for other purposes." NSF makes every effort to conduct a fair, competitive, transparent merit review process for the selection of projects.

1. Merit Review Principles

These principles are to be given due diligence by PIs and organizations when preparing proposals and managing projects, by reviewers when reading and evaluating proposals, and by NSF program staff when determining whether or not to recommend proposals for funding and while overseeing awards. Given that NSF is the primary federal agency charged with nurturing and supporting excellence in basic research and education, the following three principles apply:

- All NSF projects should be of the highest quality and have the potential to advance, if not transform, the frontiers of knowledge.
- NSF projects, in the aggregate, should contribute more broadly to achieving societal goals. These "Broader Impacts" may be accomplished through the research itself, through activities that are directly related to specific research projects, or through activities that are supported by, but are complementary to, the project. The project activities may be based on previously established and/or innovative methods and approaches, but in either case must be well justified.
- Meaningful assessment and evaluation of NSF funded projects should be based on appropriate metrics, keeping in mind the likely correlation between the effect of broader impacts and the resources provided to implement projects. If the size of the activity is limited, evaluation of that activity in isolation is not likely to be meaningful. Thus, assessing the effectiveness of these activities may best be done at a higher, more aggregated, level than the individual project.

With respect to the third principle, even if assessment of Broader Impacts outcomes for particular projects is done at an aggregated level, PIs are expected to be accountable for carrying out the activities described in the funded project. Thus, individual projects should include clearly stated goals, specific descriptions of the activities that the PI intends to do, and a plan in place to document the outputs of those activities.

These three merit review principles provide the basis for the merit review criteria, as well as a context within which the users of the criteria can better understand their intent.

2. Merit Review Criteria

All NSF proposals are evaluated through use of the two National Science Board approved merit review criteria. In some instances, however, NSF will employ additional criteria as required to highlight the specific objectives of certain programs and activities.

The two merit review criteria are listed below. **Both** criteria are to be given **full consideration** during the review and decision-making processes; each criterion is necessary but neither, by itself, is sufficient. Therefore, proposers must fully address both criteria. (PAPPG Chapter II.D.2.d(i). contains additional information for use by proposers in development of the Project Description section of the proposal). Reviewers are strongly encouraged to review the criteria, including PAPPG Chapter II.D.2.d(i), prior to the review of a proposal.

When evaluating NSF proposals, reviewers will be asked to consider what the proposers want to do, why they want to do it, how they plan to do it, how they will know if they succeed, and what benefits could accrue if the project is successful. These issues apply both to the technical aspects of the proposal and the way in which the project may make broader contributions. To that end, reviewers will be asked to evaluate all proposals against two criteria:

- **Intellectual Merit:** The Intellectual Merit criterion encompasses the potential to advance knowledge; and

- **Broader Impacts:** The Broader Impacts criterion encompasses the potential to benefit society and contribute to the achievement of specific, desired societal outcomes.

The following elements should be considered in the review for both criteria:

1. What is the potential for the proposed activity to
 - a. Advance knowledge and understanding within its own field or across different fields (Intellectual Merit); and
 - b. Benefit society or advance desired societal outcomes (Broader Impacts)?
2. To what extent do the proposed activities suggest and explore creative, original, or potentially transformative concepts?
3. Is the plan for carrying out the proposed activities well-reasoned, well-organized, and based on a sound rationale? Does the plan incorporate a mechanism to assess success?
4. How well qualified is the individual, team, or organization to conduct the proposed activities?
5. Are there adequate resources available to the PI (either at the home organization or through collaborations) to carry out the proposed activities?

Broader impacts may be accomplished through the research itself, through the activities that are directly related to specific research projects, or through activities that are supported by, but are complementary to, the project. NSF values the advancement of scientific knowledge and activities that contribute to achievement of societally relevant outcomes. Such outcomes include, but are not limited to: full participation of women, persons with disabilities, and other underrepresented groups in science, technology, engineering, and mathematics (STEM); improved STEM education and educator development at any level; increased public scientific literacy and public engagement with science and technology; improved well-being of individuals in society; development of a diverse, globally competitive STEM workforce; increased partnerships between academia, industry, and others; improved national security; increased economic competitiveness of the United States; and enhanced infrastructure for research and education.

Proposers are reminded that reviewers will also be asked to review the Data Management and Sharing Plan and the Mentoring Plan, as appropriate.

Additional Solicitation Specific Review Criteria

In addition to the standard NSF criteria for evaluating proposals, reviewers will be asked to evaluate the proposal on the following criteria:

- Proposals must clearly explain the proposed work's benefit to life on earth.
- Proposals must clearly explain the necessity of the ISS to carry out the proposed project.
- Proposals must detail how experiments will be conducted on the ISS and what, if any, ground experimental controls will be utilized.
- Proposals must include a timeline where milestones are clearly identified for the duration of the project.
- Proposals must specify existing or proposed flight hardware (including any necessary modification) to be used in the project. If a modification to existing hardware is proposed, proposals should describe design requirements, critical components, ground testing, timelines, and projected costs that fit within the stated scope.

B. Review and Selection Process

Proposals submitted in response to this program solicitation will be reviewed by Ad hoc Review and/or Panel Review.

Reviewers will be asked to evaluate proposals using two National Science Board approved merit review criteria and, if applicable, additional program specific criteria. A summary rating and accompanying narrative will generally be completed and submitted by each reviewer and/or panel. The Program Officer assigned to manage the proposal's review will consider the advice of reviewers and will formulate a recommendation.

After scientific, technical and programmatic review and consideration of appropriate factors, the NSF Program Officer recommends to the cognizant Division Director whether the proposal should be declined or recommended for award. NSF strives to be able to tell proposers whether their proposals have been declined or recommended for funding within six months. Large or particularly complex proposals or proposals from new recipients may require additional review and processing time. The time interval begins on the deadline or target date, or receipt date, whichever is later. The interval ends when the Division Director acts upon the Program Officer's recommendation.

After programmatic approval has been obtained, the proposals recommended for funding will be forwarded to the Division of Grants and Agreements or the Division of Acquisition and Cooperative Support for review of business, financial, and policy implications. After an administrative review has occurred, Grants and Agreements Officers perform the processing and issuance of a grant or other agreement. Proposers are cautioned that only a Grants and Agreements Officer may make commitments, obligations or awards on behalf of NSF or authorize the expenditure of funds. No commitment on the part of NSF should be inferred from technical or budgetary discussions with a NSF Program Officer. A Principal Investigator or organization that makes financial or personnel commitments in the absence of a grant or cooperative agreement signed by the NSF Grants and Agreements Officer does so at their own risk.

Once an award or declination decision has been made, Principal Investigators are provided feedback about their proposals. In all cases, reviews are treated as confidential documents. Verbatim copies of reviews, excluding the names of the reviewers or any reviewer-identifying information, are sent to the Principal Investigator/Project Director by the Program Officer. In addition, the proposer will receive an explanation of the decision to award or decline funding.

VII. Award Administration Information

A. Notification of the Award

Notification of the award is made to *the submitting organization* by an NSF Grants and Agreements Officer. Organizations whose proposals are declined will be advised as promptly as possible by the cognizant NSF Program administering the program. Verbatim copies of reviews, not including the identity of the reviewer, will be provided automatically to the Principal Investigator. (See Section VI.B. for additional information on the review process.)

B. Award Conditions

An NSF award consists of: (1) the award notice, which includes any special provisions applicable to the award and any numbered amendments thereto; (2) the budget, which indicates the amounts, by categories of expense, on which NSF has based its support (or otherwise communicates any specific approvals or disapprovals of proposed expenditures); (3) the proposal referenced in the award notice; (4) the applicable award conditions, such as Grant General Conditions (GC-1)*; and (5) any announcement or other NSF issuance that may be incorporated by reference in the award notice. Cooperative agreements also are administered in accordance with NSF Cooperative Agreement Financial and Administrative Terms and Conditions (CA-FATC) and the applicable Programmatic Terms and Conditions. NSF awards are electronically signed by an NSF Grants and Agreements Officer and transmitted electronically to the organization via e-mail.

*These documents may be accessed electronically on NSF's Website at https://www.nsf.gov/awards/managing/award_conditions.jsp?org=NSF. Paper copies may be obtained from the NSF Publications Clearinghouse, telephone (703) 292-8134 or by e-mail from nsfpubs@nsf.gov.

More comprehensive information on NSF Award Conditions and other important information on the administration of NSF awards is contained in the NSF *Proposal & Award Policies & Procedures Guide* (PAPPG) Chapter VII, available electronically on the NSF Website at https://www.nsf.gov/publications/pub_summ.jsp?ods_key=pappg.

Administrative and National Policy Requirements

Build America, Buy America

As expressed in Executive Order 14005, [Ensuring the Future is Made in All of America by All of America's Workers](#) (86 FR 7475), it is the policy of the executive branch to use terms and conditions of Federal financial assistance awards to maximize, consistent with law, the use of goods, products, and materials produced in, and services offered in, the United States.

Consistent with the requirements of the Build America, Buy America Act (Pub. L. 117-58, Division G, Title IX, Subtitle A, November 15, 2021), no funding made available through this funding opportunity may be obligated for infrastructure projects under an award unless all iron, steel, manufactured products, and construction materials used in the project are produced in the United States. For additional information, visit NSF's [Build America, Buy America](#) web page

Special Award Conditions:

Joint NSF/CASIS recipients will be required to include appropriate acknowledgment of NSF and CASIS support in reports and/or publications of work performed under this award. An example of such an acknowledgment is: "This material is based upon work supported by NSF and CASIS under Award No. [Recipient should enter the awarding entities award number(s)]."

Recipients will be required to submit annual and final annual project reports to NSF and interim progress reports to CASIS to ensure timely execution of the flight experiments.

C. Reporting Requirements

For all multi-year grants (including both standard and continuing grants), the Principal Investigator must submit an annual project report to the cognizant Program Officer no later than 90 days prior to the end of the current budget period. (Some programs or awards require submission of more frequent project reports). No later than 120 days following expiration of a grant, the PI also is required to submit a final annual project report, and a project outcomes report for the general public.

Failure to provide the required annual or final annual project reports, or the project outcomes report, will delay NSF review and processing of any future funding increments as well as any pending proposals for all identified PIs and co-PIs on a given award. PIs should examine the formats of the required reports in advance to assure availability of required data.

PIs are required to use NSF's electronic project-reporting system, available through [Research.gov](#), for preparation and submission of annual and final annual project reports. Such reports provide information on accomplishments, project participants (individual and organizational), publications, and other specific products and impacts of the project. Submission of the report via [Research.gov](#) constitutes certification by the PI that the contents of the report are accurate and complete. The project outcomes report also must be prepared and submitted using [Research.gov](#). This report serves as a brief summary, prepared specifically for the public, of the nature and outcomes of the project. This report will be posted on the NSF website exactly as it is submitted by the PI.

More comprehensive information on NSF Reporting Requirements and other important information on the administration of NSF awards is contained in the *NSF Proposal & Award Policies & Procedures Guide* (PAPPG) Chapter VII, available electronically on the NSF Website at https://www.nsf.gov/publications/pub_summ.jsp?ods_key=pappg.

VIII. Agency Contacts

Please note that the program contact information is current at the time of publishing. See program website for any updates to the points of contact.

General inquiries regarding this program should be made to:

- Rizia Bardhan, telephone: (703) 292-2390, email: rbardhan@nsf.gov
- Gretchen J. Mahler, telephone: (703) 292-7354, email: gmahler@nsf.gov
- Shivani Sharma, telephone: (703) 292-4204, email: shisharm@nsf.gov

- Steven M. Zehnder, telephone: (703) 292-7014, email: szehnder@nsf.gov
- Kristin Kopperud, telephone: (859) 806-9838, email: kkopperud@issnationallab.org

For questions related to the use of NSF systems contact:

- NSF Help Desk: 1-800-381-1532
- Research.gov Help Desk e-mail: rgov@nsf.gov

For questions relating to Grants.gov contact:

- Grants.gov Contact Center: If the Authorized Organizational Representatives (AOR) has not received a confirmation message from Grants.gov within 48 hours of submission of application, please contact via telephone: 1-800-518-4726; e-mail: support@grants.gov.

IX. Other Information

The NSF website provides the most comprehensive source of information on NSF Directorates (including contact information), programs and funding opportunities. Use of this website by potential proposers is strongly encouraged. In addition, "NSF Update" is an information-delivery system designed to keep potential proposers and other interested parties apprised of new NSF funding opportunities and publications, important changes in proposal and award policies and procedures, and upcoming NSF [Grants Conferences](#). Subscribers are informed through e-mail or the user's Web browser each time new publications are issued that match their identified interests. "NSF Update" also is available on [NSF's website](#).

Grants.gov provides an additional electronic capability to search for Federal government-wide grant opportunities. NSF funding opportunities may be accessed via this mechanism. Further information on Grants.gov may be obtained at <https://www.grants.gov>.

About the Center for the Advancement of Science in Space (CASIS)

The Center for the Advancement of Science in Space (CASIS) is an IRC Section 501(c)(3) entity responsible for management of the International Space Station (ISS) U.S. National Laboratory under a Cooperative Agreement with NASA (80JSC018M0005). Per Section 504 of the NASA Authorization Act of 2010, the purpose of CASIS is to maximize the value of the investment the U.S. government made in the ISS National Lab and demonstrate the scientific and technological productivity of the ISS National Lab over the next decade. CASIS seeks to advance scientific research, technology development, and education in conjunction with utilization of the ISS, managing a diverse research, technology, and education portfolio across a broad range of scientific fields.

CASIS Goals

1. Stimulate, develop, and manage U.S. national uses of the ISS National Lab by U.S. government agencies, academic institutions, and private firms; and
2. Develop tools and techniques to communicate the value of uses of the ISS research platform, and increase the return on the U.S. investment in the ISS National Lab.

The Center for Advancement of Science in Space may be reached at:

1005 Viera Blvd., Suite 101, Rockledge, FL 32955, Telephone: (321) 253-5101

About The National Science Foundation

The National Science Foundation (NSF) is an independent Federal agency created by the National Science Foundation Act of 1950, as amended (42 USC 1861-75). The Act states the purpose of the NSF is "to promote the progress of science; [and] to advance the national health, prosperity, and welfare by supporting research and education in all fields of science and engineering."

NSF funds research and education in most fields of science and engineering. It does this through grants and cooperative agreements to more than 2,000 colleges, universities, K-12 school systems, businesses, informal science organizations and other research organizations throughout the US. The Foundation accounts for about one-fourth of Federal support to academic institutions for basic research.

NSF receives approximately 55,000 proposals each year for research, education and training projects, of which approximately 11,000 are funded. In addition, the Foundation receives several thousand applications for graduate and postdoctoral fellowships. The agency operates no laboratories itself but does support National Research Centers, user facilities, certain oceanographic vessels and Arctic and Antarctic research stations. The Foundation also supports cooperative research between universities and industry, US participation in international scientific and engineering efforts, and educational activities at every academic level.

Facilitation Awards for Scientists and Engineers with Disabilities (FASSED) provide funding for special assistance or equipment to enable persons with disabilities to work on NSF-supported projects. See the *NSF Proposal & Award Policies & Procedures Guide* Chapter II.F.7 for instructions regarding preparation of these types of proposals.

The National Science Foundation has Telephonic Device for the Deaf (TDD) and Federal Information Relay Service (FIRS) capabilities that enable individuals with hearing impairments to communicate with the Foundation about NSF programs, employment or general information. TDD may be accessed at (703) 292-5090 and (800) 281-8749, FIRS at (800) 877-8339.

The National Science Foundation Information Center may be reached at (703) 292-5111.

The National Science Foundation promotes and advances scientific progress in the United States by competitively awarding grants and cooperative agreements for research and education in the sciences, mathematics, and engineering.

To get the latest information about program deadlines, to download copies of NSF publications, and to access abstracts of awards, visit the NSF Website at <https://www.nsf.gov>.

- **Location:** 2415 Eisenhower Avenue, Alexandria, VA 22314
- **For General Information** (NSF Information Center): (703) 292-5111
- **TDD (for the hearing-impaired):** (703) 292-5090
- **To Order Publications or Forms:**
 - Send an e-mail to: nsfpubs@nsf.gov
 - or telephone: (703) 292-8134
- **To Locate NSF Employees:** (703) 292-5111

Privacy Act And Public Burden Statements

The information requested on proposal forms and project reports is solicited under the authority of the National Science Foundation Act of 1950, as amended. The information on proposal forms will be used in connection with the selection of qualified proposals; and project reports submitted by proposers will be used for program evaluation and reporting within the Executive Branch and to Congress. The information requested may be disclosed to qualified reviewers and staff assistants as part of the proposal review process; to proposer institutions/recipients to provide or obtain data regarding the proposal review process, award decisions, or the administration of awards; to government contractors, experts, volunteers and researchers and educators as necessary to complete assigned work; to other government agencies or other entities needing information regarding proposers or nominees as part of a joint application review process, or in

order to coordinate programs or policy; and to another Federal agency, court, or party in a court or Federal administrative proceeding if the government is a party. Information about Principal Investigators may be added to the Reviewer file and used to select potential candidates to serve as peer reviewers or advisory committee members. See [System of Record Notices, NSF-50](#), "Principal Investigator/Proposal File and Associated Records," and [NSF-51](#), "Reviewer/Proposal File and Associated Records." Submission of the information is voluntary. Failure to provide full and complete information, however, may reduce the possibility of receiving an award.

An agency may not conduct or sponsor, and a person is not required to respond to, an information collection unless it displays a valid Office of Management and Budget (OMB) control number. The OMB control number for this collection is 3145-0058. Public reporting burden for this collection of information is estimated to average 120 hours per response, including the time for reviewing instructions. Send comments regarding the burden estimate and any other aspect of this collection of information, including suggestions for reducing this burden, to:

Suzanne H. Plimpton
Reports Clearance Officer
Policy Office, Division of Institution and Award Support
Office of Budget, Finance, and Award Management
